The Need for Coordinated Protection

CRITICAL FACTORS

Critical factors need to be considered when determining the need for facility protection. Many factors can be determined by answering the following questions:

- What is the risk to personnel?
- What is the risk of equipment damage?
- What are the consequences of equipment failure?
- Is the equipment associated with an essential service?
- How will equipment failure affect overall facility operation and revenue generation?
- What are the legal implications of providing inadequate protection?

The statistical nature of lightning and the broad spectrum of energy delivered by a lightning flash, the problems created by various power generation and distribution systems, and the continued trend to more sensitive and specialized electronics, requires careful selection of available technologies if adequate protection is to be provided.

WHAT ARE THE COSTS OF INADEQUATE PROTECTION?

The costs that can result from inadequate protection are many and varied. The type of equipment within a facility will have a direct impact on the damage that can occur. Robust equipment, such as lighting and air-conditioning systems, are often able to withstand impulses as high as 1500 volts and are not as sensitive to the rapid rate-of-rise exhibited by the pre-clamped surge waveform as are electronics.

These systems are often not critical to the continuing operation of the site and therefore usually do not require the premium level of protection that is essential for more sensitive equipment.

However, significant damage can occur, even to the more robust systems, as a result of lightning induced surges resulting within a radius of several kilometers, or from switching induced surges. Costs can range from degradation of electrical or electronic systems to data loss, equipment destruction or injury to personnel. Some of these costs can appear relatively minor but the loss of an essential service or revenues associated with a facility or plant shut down can be enormous.

SOURCES OF TRANSIENTS AND SURGES

Although lightning is the most spectacular form of externally generated surges, it is only one source of over-voltage. Other sources include the switching of power circuits, the operation of electrical equipment by neighboring industries, the operation of

power factor correction devices, and the switching and clearing of faults on transmission lines. It is important to note that lightning does not need to directly strike a power line for such damage to occur; a strike several hundred meters away can induce large damaging transients, even to underground cables.

It is estimated that 70 to 85% of all transients are generated internally within one's own facility by the switching of electrical loads such as lights, heating systems, motors and the operation of office equipment.

Modern industry is highly reliant on electronic equipment and automation to increase productivity and safety. The economic benefits of such devices are well accepted. Computers are commonplace and microprocessor-based controllers are used in most manufacturing facilities. Microprocessors can also be found embedded in many industrial machines, security & fire alarms, time clocks and inventory tracking tools. Given the wide range of transient sources and the potential cost of disruption, the initial installed cost of surge

protection can readily be justified for any facility.

As a guide, the cost of protection should be approximately 10% of the cost of the facility's economic risk.

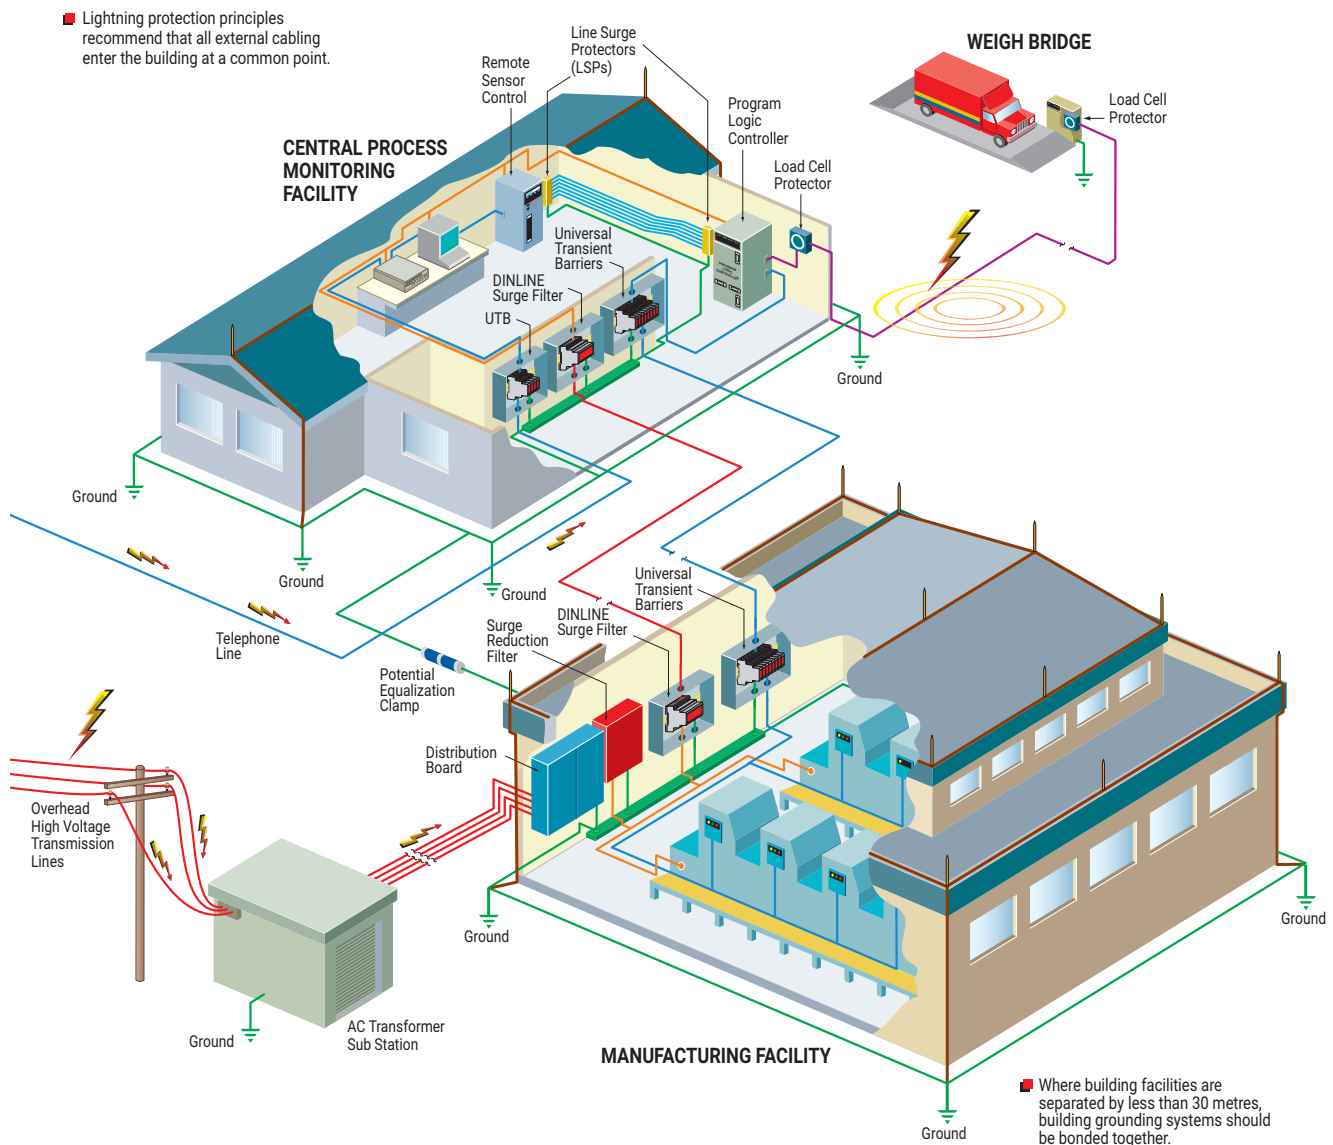

Damage to vital equipment caused by destructive surges and transients.

The Need for Coordinated Protection

Reliable protection of structures, industrial and commercial operations and personnel, demands a systematic and comprehensive approach to minimize the threats caused by transient over-voltages. Grounding, bonding, lightning protection and surge protection all need to be considered for comprehensive facility electrical protection. Each of these are interdependent disciplines that need a holistic design approach to ensure the facility is not left with a vulnerable “blind spot”. The investment in surge protection can be wasted if “blind spots” exist. For example, installing a surge protection device on the power supply to a programmable logic controller is of little value if the I/O lines are not also protected. In addition, an air terminal on the facility may capture the lightning energy but without a dependable

ground system, this energy cannot be safely dissipated. Equally, even the most expensive Surge Protection Devices (SPDs) are poor performers if a low impedance equipotential ground is not provided. These interdependent disciplines are best applied when looking at a total facility rather than at an individual piece of equipment or portion of the facility.

It is for these reasons that nVent ERICO developed the Six Point Plan of Protection. The plan prompts the consideration of a coordinated approach to lightning protection, surge and transient protection and grounding, an approach that embraces all aspects of potential damage, from the more obvious direct strike to the more subtle mechanisms of differential earth potential rises and voltage induction at service entry points.

The Six Point Plan applied to a manufacturing facility. Surge and transient protection principles applied to a total facility rather than individual pieces of equipment.

Six Point Plan of Protection

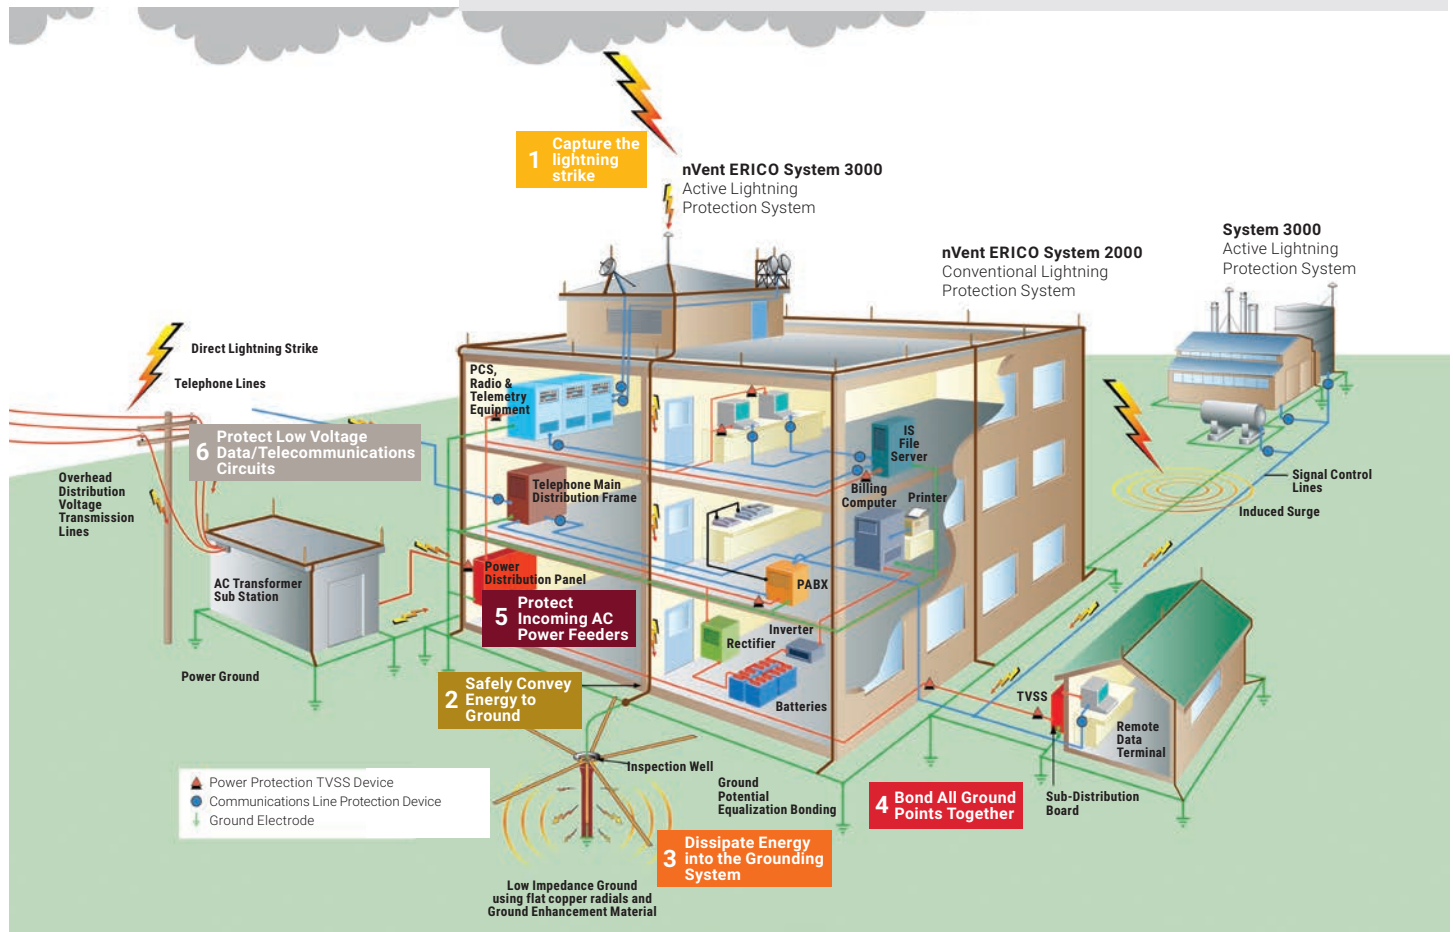

By following the Six Point Plan of Protection, nVent ERICO customers are able to implement the most effective solutions to individual lightning, grounding and surge problems while retaining an integrated protection philosophy.

Point 5 of the Six Point Plan advocates protection of AC power services, advocating a coordinated approach to surge protection, where the first stage of defense is the installation of primary protection devices at the mains supply service entrance, followed by secondary protection at distribution branch panels and where necessary, at point-of-use applications.

Point 6 recognizes the need to provide effective surge protection on cables supplying telecommunications, signal and data management equipment.

The Six Point Plan of Protection from nVent ERICO

- 1 Capture the lightning strike.**
Capture the lightning strike to a known and preferred attachment point using a purpose-designed air terminal system.
- 2 Convey this energy to ground.**
Conduct the energy to the ground via a purpose-designed downconductor.
- 3 Dissipate energy into the grounding system.**
Dissipate energy into a low impedance grounding system.
- 4 Bond all ground points together.**
Bond all ground points to eliminate ground loops and create an equipotential plane.
- 5 Protect incoming AC power feeders.**
Protect equipment from surges and transients on incoming power lines to prevent equipment damage and costly operational downtime.
- 6 Protect low voltage data/telecommunications circuits.**
Protect equipment from surges and transients on incoming telecommunications and signal lines to prevent equipment damage and costly operational downtime.

nVent ERICO Expertise

The nVent ERICO advantage is our approach to the complete Facility Electrical Protection Solution. Well designed and high quality Surge Protection is critical to a facility equipment's reliable operation, however it is only part of the solution.

nVent ERICO therefore offers the complete range and expertise in grounding, bonding, surge and lightning protection, providing the complete solution worldwide and across applications including Commercial, Industrial, Telecom, Utility and Railway. Our service and expertise encompasses more than just the product.

PRODUCT TESTING

To effectively meet market requirements and ensure our products are designed and tested to the highest of performance standards, nVent ERICO has invested in state of the art testing equipment that is able to:

- Support application testing for clients – to ensure your equipment is adequately protected.
- Participate in the UL Client Test Data Program.
- Support competitive product testing.
- Test and evaluate to a range of mechanical, electrical and environmental requirements.

HISTORY

nVent ERICO continues to be a pioneer in the low voltage Surge Protection industry, having been involved in grounding and bonding applications for over 100 years, and as a manufacturer of SPDs for over thirty years.

Our involvement in the industry predates the creation of the initial IEC and UL low voltage surge protection standards. We've been on the journey since the early days of Low Voltage AC surge protection, with the issuing of the IEEE587 standard in 1980, and we have been active on all major worldwide SPD standards committees and industry bodies (including IEEE, IEC, and UL) since.

SEMINARS AND SITE AUDITS

Each year nVent ERICO conducts hundreds of seminars in numerous countries around the world, educating specifiers, engineers, and installers on Facility Electrical Protection, of which surge protection plays a key role.

Certified Surge Protection Devices

nVent ERICO surge protective devices (SPDs) provide the option for traditional construction or TD technology. For example, the DT product line features traditional construction, while the EDT product line features with TD technology. These product lines have been designed and independently tested and certified to the latest editions of both IEC61643-11 and UL1449 Ed4.

This provides the user of the product peace of mind that the products will perform safely in application, and also perform to the claimed ratings provided. Both these standards have stringent tests that are not easy to pass, but essential to ensure the product is designed well for safe behavior, and for effective protection performance to the product ratings.

Compliance to these standards are required by code in many countries, however still many countries around the world do not require compliance, leaving those countries vulnerable to poorly performing products.

An informed buyer will avoid non-compliant product, instead demanding compliance to one or both of these standards, factually verified by an independent third party test laboratory certificate. Compliance to these standards alone however should be considered a benchmark or minimum

requirement, as there are certain enhanced performance requirements that may be advantageous for some applications.

One example of this is how the SPD performs during an AC overvoltage event. In both standards referenced above,

the requirement is for the SPD to safely disconnect from service during these events, however a better solution is for the SPD to survive such an event, thereby continuing to provide protection to your valuable equipment being protected.

nVent ERICO's TD technology delivers just that, a true step-up in performance for SPDs. Our SPDs with TD technology have been designed to be unaffected by the AC overvoltages applied during testing, while not compromising the clamping performance. This provides them with the ability to survive extreme overvoltage conditions and still be operational afterwards to protect your valuable equipment from subsequent surges and transients.

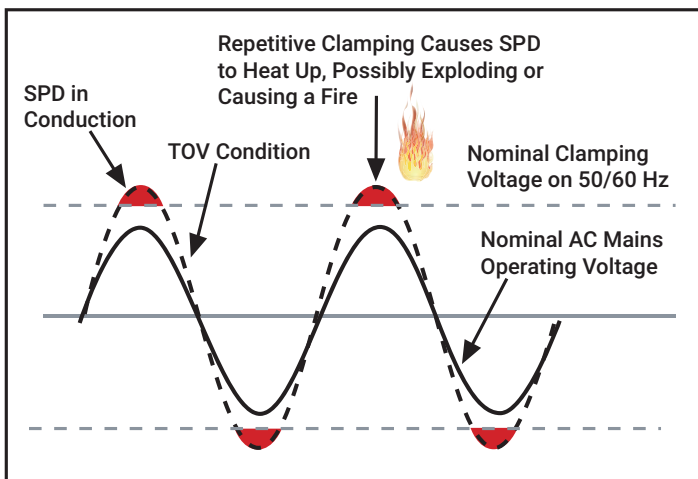

This extends greatly the life expectancy of the SPD within the most extreme environments, saving maintenance work and reducing operational downtime.

Transient Discriminating Technology

To meet the fundamental requirements of performance, longer service life and greater safety under real world conditions, nVent ERICO has developed Transient Discriminating (TD) Technology.

This quantum leap in technology adds a level of “intelligence” to the Surge Protection Device enabling it to discriminate between sustained abnormal overvoltage conditions (Temporary Over Voltages – TOVs) and true transient or surge events. Not only does this help ensure safe operation under practical application, but it also prolongs the life of the protector since permanent disconnects are not required as a means of achieving internal over-voltage protection.

TRADITIONAL TECHNOLOGIES

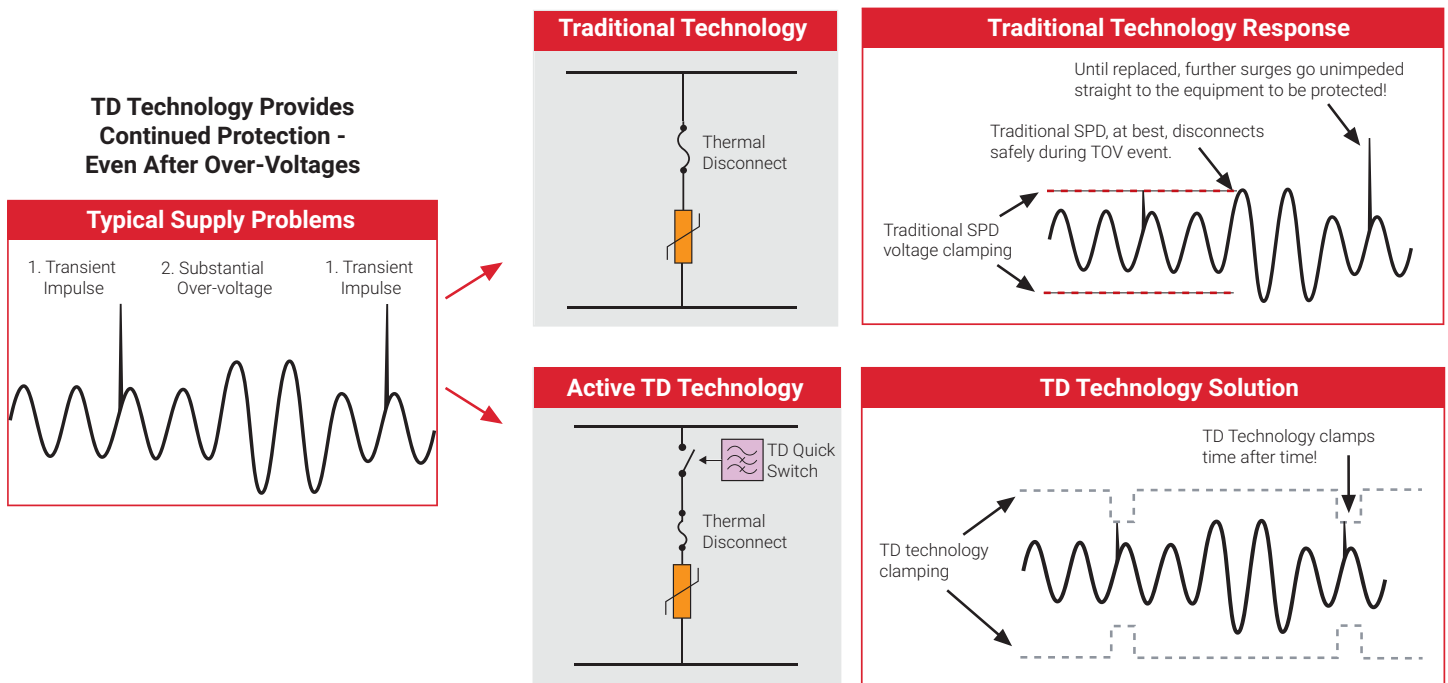

Conventional SPD technologies utilizing metal oxide varistors and/or silicon avalanche diodes to clamp or limit transient events are susceptible to sustained 50/60 Hz mains over-voltage conditions (TOVs) which often occur during faults to the utility system. Such occurrences present a significant safety hazard when the suppression device attempts to clamp the peak of each half cycle on the mains overvoltage.

This condition can cause the device to rapidly accumulate heat and in turn fail with the possibility of inducing a fire hazard. The diagram shows how a traditional SPD is chosen to have a nominal clamping voltage that is above the peak of the nominal AC mains voltage. However, in the lower diagram, it can be seen that when the AC mains experiences a Temporary Over-Voltage (TOV), the SPD attempts to clamp the over-voltage, and rapidly heats up, resulting in failure, potentially accompanied by fire or explosion.

The Core of TD Technology

The secret to nVent ERICO's Transient Discriminating Technology is its active frequency discrimination circuit. This patented device can discriminate between a temporary over-voltage (TOV) condition and a very fast transient, which is associated with lightning or switching-induced surges. When the transient frequencies are detected, the patented Quick-Switch within TD activates to allow the robust protection to limit the incoming transient. The frequency discriminating circuit that controls the Quick-Switch helps ensure that the SPD device is immune to the effects of a sustained 50 or 60 Hz TOV. This allows the device to keep operating, in order to help provide safe and reliable transient protection, even after an abnormal over-voltage condition has occurred.

Effectively, TD Technology allows the SPD to have two clamping levels – one well above the peak of a TOV (up to twice its nominal AC voltage!), and the other much lower, to effectively and swiftly clamp lightning transients.

As the explanatory illustration shows, this allows the TD circuit to still remain operational after TOV events, thus continuing to clamp transients and providing a much longer operational life. For example, the IEC 61643-11 standard applies a test of 442 Vac for two hours from Line to Neutral for SPDs intended to operate at 230 Vac. While most SPDs fail safely during this test, nVent ERICO's EDT2 Series SPDs are unaffected by this stringent test, and remain completely operational. The IEC 61643-11 standard calls this Withstand mode, as opposed to Safe Failure mode.

nVent ERICO SPDs that incorporate TD Technology are especially recommended for any site where sustained over-voltages are known to occur, and where failure of traditional SPD technologies cannot be tolerated.

Selection and Application of AC Power System SPDs (UL System)

RECOMMENDED SURGE RATINGS (8/20 μ s)

"TYPE" OF SPD

In the UL system, SPDs are tested to various Types, intended to assess and assure their suitability for use in different locations and circumstances. The Type of SPD indicates its suitability for use in certain areas of a facility (service entrance, Branch Panel, etc.). Because of this, the battery of tests that the SPD are subject to will be more or less severe, in descending order of Type.

The SPD Types are as follows:

Type 1 – Permanently connected SPDs, intended for installation between the secondary of the service transformer and the line side of the service equipment overcurrent device, as well as the load side, including Molded Case SPDs intended to be installed without an external overcurrent protective device.

Type 2 – Permanently connected SPDs intended for installation on the load side of the service equipment overcurrent device; including SPDs located at the branch panel and Molded Case SPDs.

Type 3 – Point of utilization SPDs, installed at a minimum conductor length of 30 feet (10 meters) from the electrical service panel to the point of utilization, for example cord connected, direct plug-in, receptacle type and SPDs installed at the utilization equipment being protected.

Type 4 Component Assemblies – Component assembly consisting of one or more Type 5 components together with a disconnect (integral or external) or a means of complying with the limited current tests.

Type 1, 2, 3 Component Assemblies – Consists of a Type 4 component assembly with internal or external short circuit protection.

Type 5 – Discrete component surge suppressors, such as MOVs that may be mounted on a PWB, connected by its leads or provided within an enclosure with mounting means and wiring terminations.

Fitting SPDs at all three locations may not be necessary, depending on the building size, and wiring length. Generally, SPDs are always fitted at the point of entry (Service Entrance), and in smaller equipment rooms may just be, additionally, at the equipment. In larger buildings, spread over multiple floors or large areas, SPDs should also be provided at the Branch Panels, and additionally at sensitive or critical equipment.

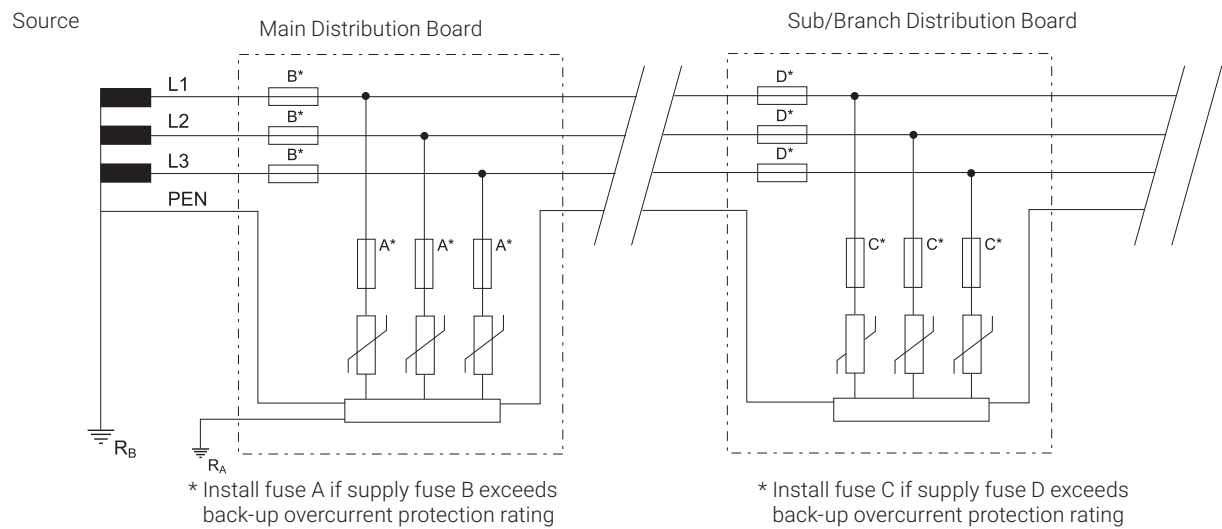

SPDs are primarily rated according to how large a surge current magnitude they can handle, and how well they limit the voltage while conducting that surge current. These parameters are

Selection and Application of AC Power System SPDs

Having determined the Class of SPD required, the correct voltage and configuration needs to be determined. The standard IEC 60364-1 details the following system configurations. In the descriptions that follow, U_0 is used for the nominal systems voltage, and U_c is used for the maximum continuous operating voltage (this is a parameter of an SPD).

TN-C System

In this system, the neutral and protective earth conductor are combined in a single conductor throughout the system. This conductor is referred to as a PEN, a “Protective Earth & Neutral”. All exposed conductive equipment parts are connected to the PEN.

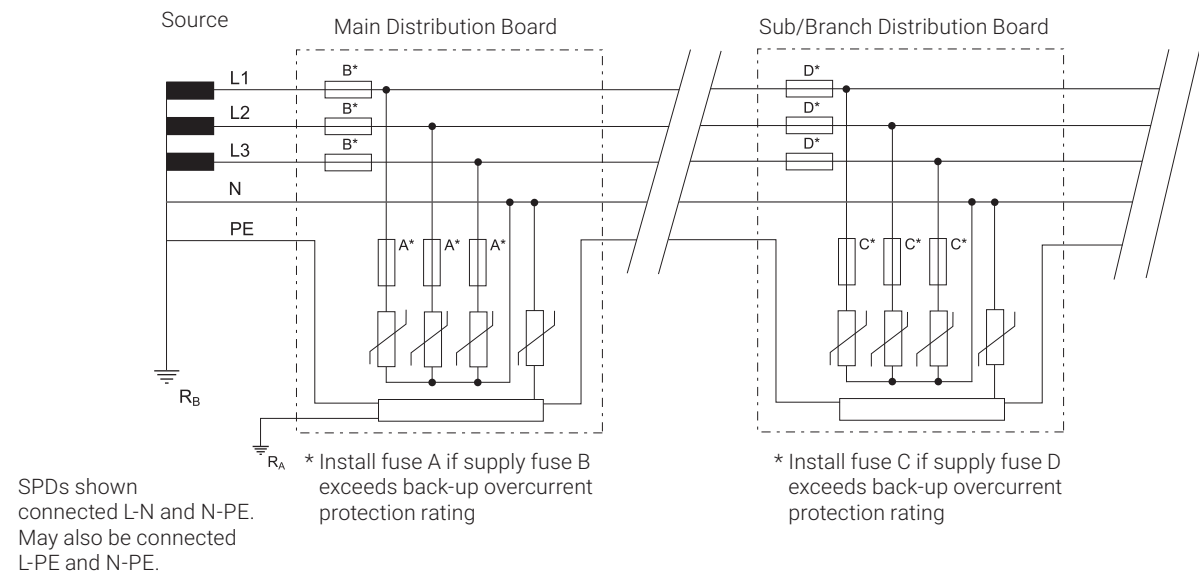

SPDs installed	Description	Example product
Phase to PEN ("3+0")	At least 1.1 x U_0	DT230030R

For example, on a 230 V Ph-N system, Ph-PEN protection should have a U_c rating of at least 255 V. Generally an SPD with a U_c rating of at least 275 V would be selected for 220 to 240 V systems. Often, to allow for power supply voltage fluctuations, a U_c of at least 1.3 x U_0 is recommended, such as a U_c of 300 V for a 230 V system, or nVent ERICO's TD technology would be chosen.

TN-S System

In this system, a separate neutral and protective earth conductor are run throughout. The Protective Earth (PE) conductor is normally a separate conductor, but can also be the metallic sheath of the power cable. All exposed conductive equipment parts are connected to the PE conductor.

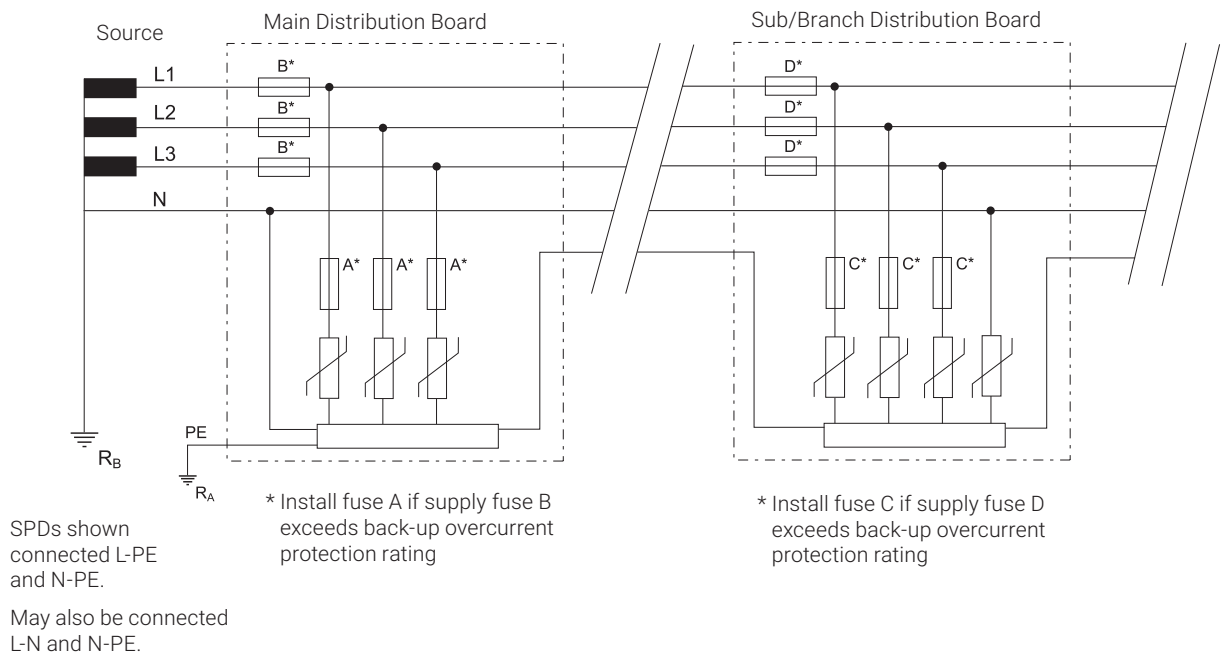

Selection and Application of AC Power System SPDs

SPDs installed	Description	Example product
Phase to PE ("4+0"), or	At least 1.1 x Uoc	DT230040R
Phase-N, and N-PE ("3+1")		DT230031R

For example, on a 230 V Ph-N system, Ph-PE (or Ph-N) protection should have a Uc rating of at least 255 V. Generally an SPD with a Uc rating of at least 275 V would be selected for 220 to 240 V systems. Often, to allow for power supply voltage fluctuations, a Uc of at least 1.3 x Uo is recommended, such as a Uc of 300 V for a 230 V system, or nVent ERICO's TD technology would be chosen.

TN-C-S System

In this system, the supply is configured as per TN-C, while the downstream installation is configured as per TN-S. The combined PEN conductor typically occurs between the substation and the entry point into the building, and earth and neutral are separated in the Main Distribution Board. This system is also known as Protective Multiple Earthing (PME) or Multiple Earthed Neutral (MEN). The supply PEN conductor is earthed at a number of points throughout the network and generally as close to the consumer's point-of-entry as possible.

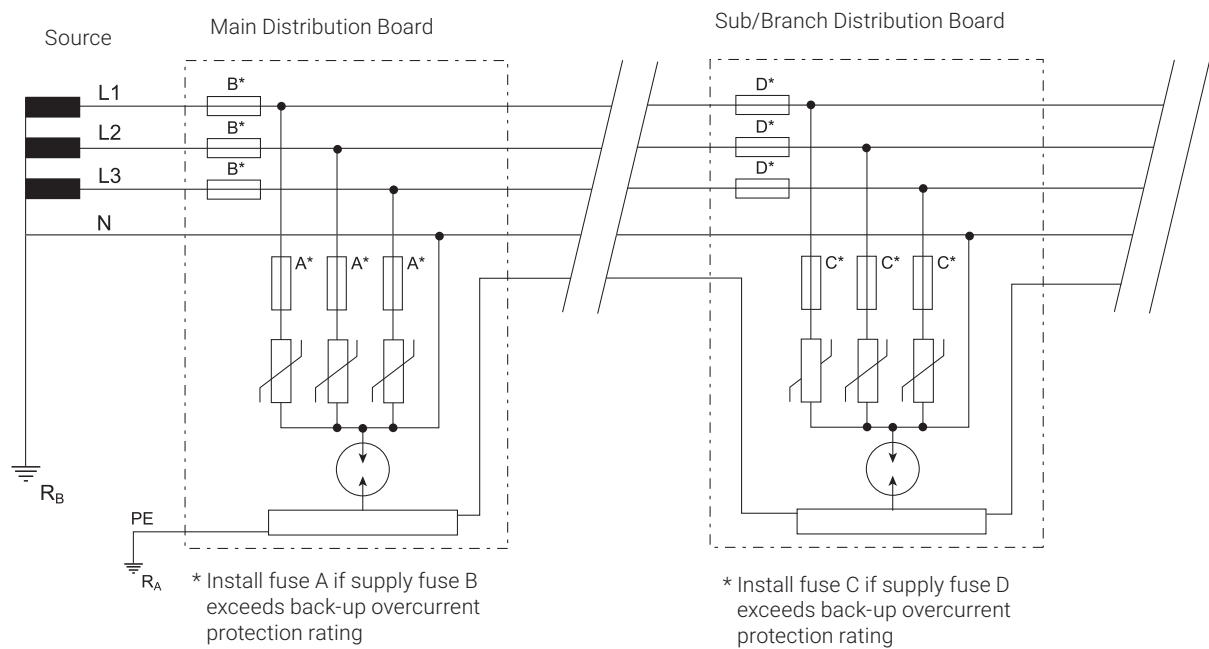

SPDs installed	Description	Example product
MDB: Phase to PEN ("3+0")		
DB: Phase to PEN ("4+0"), or	At least 1.1 x Uo	DT130030R, DT230040R, DT230031R
Phase-N, and N-PE ("3+1")		

For example, on a 230 V Ph-N system, Ph-PE (or Ph-N) protection should have a Uc rating of at least 255 V. Generally an SPD with a Uc rating of at least 275 V would be selected for 220 to 240 V systems. Often, to allow for power supply voltage fluctuations, a Uc of at least 1.3 x Uo is recommended, such as a Uc of 300 V for a 230 V system, or nVent ERICO's TD technology would be chosen.

Selection and Application of AC Power System SPDs

TT SYSTEM

A system having one point of the source of energy earthed and the exposed conductive parts of the installation connected to independent earthed electrodes. The incoming supply neutral is not earthed at the main distribution board.

SPDs installed	Description	Example product
Phase to N, N-PE ("3+1")	At least 1.1 x Uoc	DT130031R, DT230031R

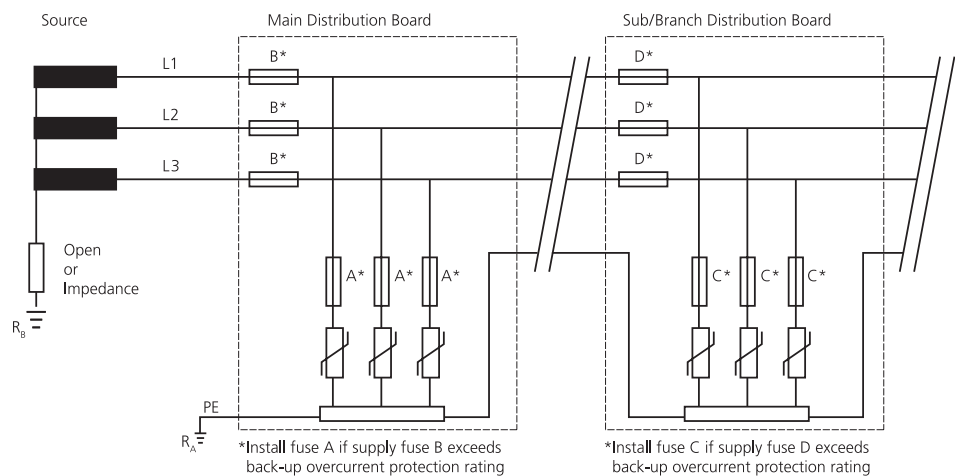

For example, on a 230 V Ph-N system, Ph-N protection should have a U_c rating of at least 255 V. Generally an SPD with a U_c rating of at least 275 V would be selected for 220 to 240 V systems. Often, to allow for power supply voltage fluctuations, a U_c of at least 1.3 x U_o is recommended, such as a U_c of 300 V for a 230V system, or nVent ERICO's TD technology would be chosen.

In the TT system, in order for overcurrent protective devices (fuses and circuit breakers) to operate in the intended manner, it is important that SPDs must not connect directly from phase to protective ground, but from phase to neutral and neutral to ground. Therefore, the Neutral-to-PE SPD carries both the PE to neutral impulse current and the PE to phase impulse currents. This SPD is recommended to be a GDT (Gas Discharge Tube) due to their generally superior energy handling characteristics.

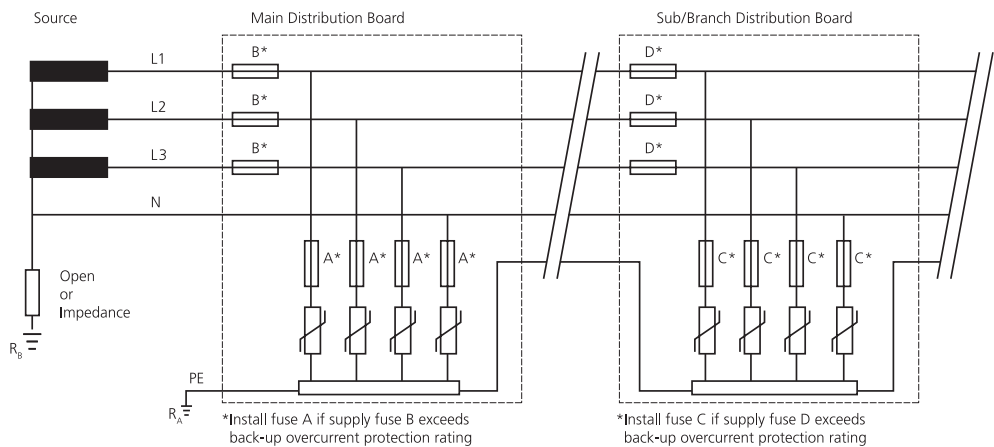

Selection and Application of AC Power System SPDs

IT SYSTEM

A system having no direct connection between live parts and earth, but all exposed conductive parts of the installation being connected to independent earthed electrodes. The source is either floating or earthed through a high impedance (to limit fault currents). This means that during a Phase to Earth fault, the systems continues to operate. This is detected, and maintenance efforts commenced to rectify the fault. However, during this time, the Phase to Earth voltage rises to the usual Line to Line voltage, and installed SPDs must withstand this during this time. Most installed IT systems do not utilise a neutral conductor - equipment is powered from line to line. The IT system is typically used in older installations in countries such as Norway and France. It is also used in special applications, such as intensive care wards of hospitals and special industrial applications.

SPDs installed	Description	Example product
Phase to PEN ("3+0")	At least 1.73 x Uo	DT230030R

SPDs installed	Description	Example product
Phase to PEN ("4+0")	At least 1.73 x Uo	DT130040R, DT230040R

For example, on a 230 V Ph-N system, Ph-PE and N-PE protection should have a Uc rating of 440 V (allowing for the L-L voltage and a 10% tolerance). Often an additional safety margin is applied, to allow for instabilities that can occur in the ungrounded IT system, such as a Uc of 480 V.

Data and Signal Line Protection

HOW TO SELECT SURGE PROTECTION FOR DATA, SIGNALLING AND CONTROL CIRCUITS

Knowing where to install surge protection can be difficult. To ensure cost-effective protection is provided for data, signalling and control circuits, two issues need to be considered:

- Where should the SPDs be installed?
- What type of SPD is appropriate for each circuit type and location?

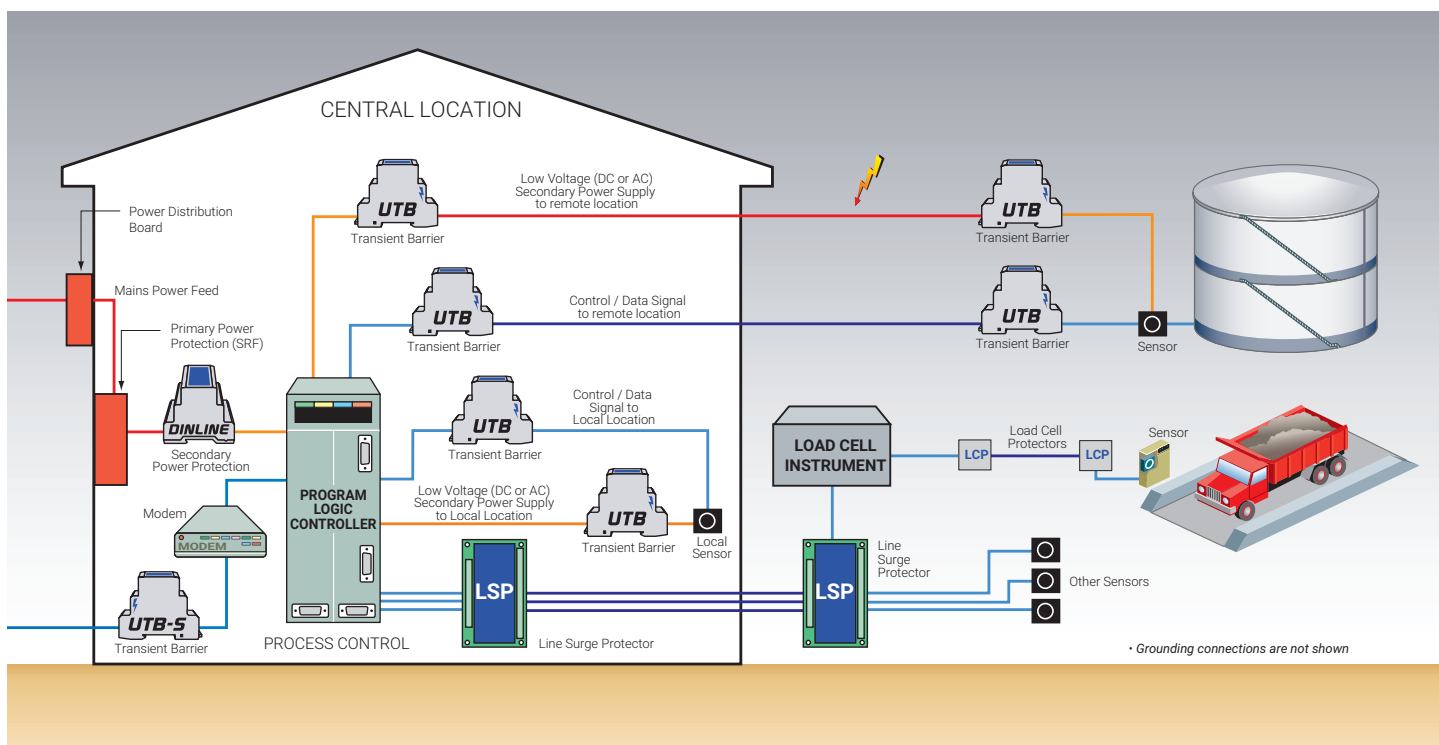

WHERE SHOULD THE SPD(S) BE INSTALLED?

Communications devices are at risk from transients being induced onto the interconnecting signal lines. The use of surge protection barriers, installed at either end of the lines, provides cost effective protection. Communication or signal lines that enter or exit the building pose the highest risk. In such circumstances, protection devices should be installed at the point-of-entry or at the equipment termination itself. Internal wiring which extends more than 10 to 15m should also be protected. Twisting or shielding of cables provides a level of protection, however this should not be regarded as sufficient for the sensitive interfaces that characterize today's communication devices.

HOW TO SELECT AN SPD FOR A GIVEN LOCATION

Five parameters must be considered to ensure that surge protection devices for use on data, signalling or control circuits are effective and do not adversely affect operation of the circuit.

1. SPDs are designed to clamp the excess transient voltage to safe levels sustainable by the equipment, yet should not interfere with the normal signalling voltages. As a guide, the SPD clamping voltage should be selected to be approximately 20% higher than peak working voltage of the circuit.
2. The line current rating of the SPD should be sufficient to handle the maximum expected signalling current.
3. The SPD bandwidth should be sufficient to allow correct operation of the system without adverse attenuation. This ensures that the attenuation of the SPD at the nominal operating frequency of the system does not exceed the stated limit. For most SPDs, frequency attenuation data or a maximum recommended baud rate is generally specified.
4. The connection termination, mounting method, number of lines to be protected and other physical aspects must be considered.
5. The SPD surge rating should be appropriate for the intended location. For circuits internal to the building, surge ratings of 1-5kA are generally sufficient. For the protection of circuits that connect to exposed lines entering or exiting the facility, 10-20kA is recommended. Alternatively a protocol or standard may be specified that defines the above parameters. All UTB products are rated 20kA for higher exposure areas.

Data and Signal Line Protection

SAMPLE APPLICATIONS

2-Wire Isolated Ground Transducers/Sensors

2-Wire Sensors

Powered Sensor Protection

Multiple Sensor or up to 4-Wire Sensor

Protecting Sensors in Hazardous Locations

Data and Signal Line Protection

GUIDE TO DATA AND SIGNALING CIRCUITS

The selection of an SPD for communication and signalling circuits requires knowledge of the:

1. Maximum Continuous Operating Voltage (U_c)
2. Maximum line current (I_L)
3. Frequency
4. Termination (connector type and/or impedance)

Where a protocol is known, this often eliminates the need to verify product selection criteria 1-3, and occasionally 4.

A number of different SPDs often meet the requirements as defined by the protocol, so the final choice of which SPD to use is often determined by its type of physical connection, number of lines to be protected, or its surge rating. Some protocols do not define the actual connector or pin configuration, and in some cases, not all lines defined by the protocol will be used. Please refer to the documentation provided with the equipment requiring protection to ensure the proposed protection modes are adequate and that the SPD's characteristics will not interfere with normal system operation.

Protocol/Standard	Description	Applicable SPD Series
RS-232 (V.24)	Unbalanced, bi-directional communication circuit. Although standard allows +/- 25 V signaling, use of more than +/- 12 V is uncommon	UTB 15 SP ⁽¹⁾ , UTB 15DP ⁽²⁾ UTB 5 ⁽¹⁾
RS-422 (V.11)	Industrial version of RS-232. 0-5 V balanced signaling	UTB 5 ⁽¹⁾
RS-423	Similar to RS-232 but +/- 5 V signaling used	UTB 5 ⁽¹⁾
RS-485	Similar to RS-422 but allows multiple devices to communicate. DB-9 connector is common	UTB 5 ⁽¹⁾
Ethernet	Ethernet is the term used to describe a family of communication protocols.	LAN RJ45 Series
Cat 4	* 10BaseT is a 10 MHz system using twisted pair of coax cables	
Cat 5	* 100BaseT is a 100 MHz system using twisted pair cables	
10BaseT	Cat 4 is a cable specification that allows operation up to 10BaseT, while Cat 5 allows operation up to 100BaseT frequencies.	
100BaseT		
Telephone Lines		UTB SA ⁽²⁾ , UTB TA ⁽²⁾
4-20 mA current loop (with HART)	Common industrial communications protocol used to interface with transducers etc	UTB xDP, UTB 30DPS, UTB xSP
Binary Signals		UTB xSP ⁽¹⁾ , UTB xDP ⁽¹⁾
Bitbus (IEEE 1118)	Digital communications network based on RS-485 and SDLC allowing communication between PLCs and controllers	UTB 5 ⁽¹⁾
CAN-Bus (data signal line)	Differential serial communications protocol defined in ISO 11898 standard	
DeviceNet (data signal line)	Communication protocol used to connect industrial devices such as limit switches, motor starters to PLCs and controllers	
M-Bus	Communication protocol for networking and remote reading of heat, gas, water, and energy meters	UTB 60 ⁽¹⁾
Ex (I) - HART, 4-20 mA circuit, measurement circuits	Hazardous locations	UTB15 Ex, UTB30 Ex
Profibus - PA	Process field bus - process automation. Ideal for explosion - hazardous areas	UTB30 Ex
Strain gauge / Load cells	As used in weigh bridges etc.	LCP01A
ASDL	Asymmetric Digital Subscriber Line. Protocol for data communication over copper telephone lines. Uses single copper wire pair.	UTB TA ⁽²⁾ , UTIntegrated Service Digital Network. Protocol for voice and data over copper telephone linesB SA ⁽²⁾
HDSL	High bit rate Digital Subscriber Line. Protocol for data communication over copper telephone lines. Uses two copper wire pairs.	
ISDN	Integrated Service Digital Network. Protocol for voice and data over copper telephone lines	

1. The number of UTB's required is dependent on the number of wires being used in the signalling circuit. UTBs are designed for balanced circuits and each UTB will protect one pair of wires. The UTB can also be used to protect two unbalanced circuits.
2. The UBT TA is rated to 500 A 8/20 us and intended to meet US NEC requirements. The UTB SA are rated to 20 kA 8/20 μs and specifically designed and approved for use on the Australian telecommunication network.

Products

AC POWER SURGE PROTECTION

DT1

The DIN Rail mounted DT1 family of SPDs provide reliable and efficient protection against voltage transients within the IEC Class I & II and UL Type 1 & 2 environments. Tested and independently certified to the IEC (via VDE) and UL standards, the DT1 Series provides a range of safety and performance features for the harshest environments and suitable for protection within a wide range of applications.

DT2

The DIN Rail mounted DT2 family provides many of the same benefits as the DT1 Series but is specifically designed to fit within the parameters of IEC Class II and UL Type 2 environments. Targeting the Class II / Type 2 classification allows the system designer to effectively select the correct coordinated protection while keeping total project costs in check.

EDT2

The DIN Rail mounted EDT2 family of SPDs provide reliable protection against voltage transients within the IEC Class II and UL Type 2 environments. In addition, nVent ERICO's Transient Discriminating (TD) technology ensures continued operation during and after sustained and abnormal over-voltage events. Tested and independently certified to the IEC (via VDE) and UL standards, the EDT2 Series provides a range of safety and performance features for the harshest environments and suitable for protection within a wide range of applications. The EDT2 Series provides extended service life in the harshest of environments, ensuring your equipment and systems are kept safe and operational through extreme abnormal voltage conditions.

TDX Modular

nVent ERICO's line of Transient Discriminating Panel Protectors are designed for critical protection applications. This line is specifically designed for equipment, panel and motor protection applications and to provide long life, even under the most adverse over-voltage conditions. All products are listed to CE, UL 1449 Ed. 4. Some of the features include: replaceable modules, TD Technology for Temporary Overvoltage protection, thermal protection, short circuit current cartridge fusing, compact enclosures, voltage presence LEDs, status indication flag per mode, audible alarm, and voltage free contacts.

TDX Compact

nVent ERICO's line of Transient Discriminating Panel Protectors are designed for critical protection applications. This line is specifically designed for equipment, panel and motor protection applications and to provide long life, even under the most adverse over-voltage conditions. All products are listed to CE, UL 1449 Ed. 4. Some of the features include: TD Technology for Temporary Overvoltage protection, thermal protection, short circuit current cartridge fusing, compact enclosures, voltage presence LEDs, audible alarm, and voltage free contacts.

Products

AC POWER SURGE PROTECTION

SES40P

The nVent ERICO SES40P Series of Surge Protective Devices (SPD) provide economical protection against damaging transients and surge events. These Type 1 devices are UL Listed to UL 1449 Edition 4 and cUL Listed to CAN/CSA C233.1. This allows installations on the line or load side (Type 1 or Type 2) of the service panel in accordance with the NEC 2014 or CAN/CSA C233.1 without the requirement for additional circuit breakers or fuses. Primary applications are service entrance, branch, commercial, industrial, and residential. Other applications include OEM panels, solar combiner boxes, UL 96A lightning protection installations and light pole applications. The housing is constructed of UV-stabilized thermoplastic and meets the UL 50 Type 4X rating, making it ideal for both indoor and outdoor applications. All of the models have a 20kA nominal discharge current rating, the highest level recognized under the UL 1449 Edition 4 standard.

SURGE FILTERS

SRF

The SRF (Surge Reduction Filters) product family combines high-energy surge diversion with surge filtering, making them ideal for primary service protection applications. Their efficient low pass filtering stage dramatically reduces the rate-of-voltage rise and the let-through voltage thereby substantially reducing the risk of physical equipment damage. They incorporate TD technology making them robust against AC power system temporary overvoltages, and their standards compliance to IEC 61643-11 Class I & Class II ensure maximum product performance with maximum product safety.

TSF

The Transient Surge Filter (TSF) product family combines nVent ERICO's Transient Discriminating (TD) technology with a low pass filter to protect against transient events and attenuate small signal RFI/EMI noise problems. Perfect for PLC controllers, SCADA systems, motor control centers, and other similar applications, the TSF also features serviceable surge modules and a compact form factor. The TSF range of products are certified to UL 1449 4th Edition, UL 1283 5th Edition (EMI Filtering), and IEC 61643-11 Class II.

DATA / SIGNAL PROTECTION

Lightning or induced surges can destroy or compromise signal communications systems and data. nVent ERICO offers multiple series of data and signal surge protection devices designed to provide transient protection for equipment from induced surges. These are also well-suited to the protection of industrial equipment and are compact in size, while offering high surge carrying capacity. nVent ERICO data and signal surge protection offers a complete solution to eliminate damage, downtime, and power disruption..

Surge Protection Product Selection

The various product solutions available are listed below. The basic division is into power protection and signal protection. Power protectors are further divided into shunt protection and series (filtering) protection. Signal protectors are generally divided by connectors types and application.

Power Protection – Non-Dinrail Type 1

Shunt protection for Power Circuits

TDX YYY V ZZZ	TDX = PRODUCT FAMILY	YYY = SURGE RATING	V = PRODUCT VERSION	ZZZ = VOLTAGE CONFIGURATION

SES40P

SERVICE ENTRANCE SUPPRESSION

Features

- Compact NEMA®-4X enclosure design can be flush mounted or installed in a small space
- LED status indication flag for status monitoring
- 40 kA 8/20 μ s maximum surge rating per mode protection suitable for service entrance and distribution panels
- CE, UL® 1449 Edition 4 Listed, CSA-22.2
- Optional bracket for mounting within panel backplane SES40PBRK

The nVent ERICO SES40P Series of Surge Protective Devices (SPD) provide economical protection against damaging transients and surge events. These Type 1 devices are UL® Listed to UL 1449 Edition 4 and cUL® Listed to CAN/CSA C233.1. This allows installations on the line or load side (Type 1 or Type 2) of the service panel in accordance with the NEC® 2014 or CAN/CSA C233.1 without the requirement for additional circuit breakers or fuses. Primary applications are service entrance, branch,

commercial, industrial, and residential. Other applications include OEM panels, solar combiner boxes, UL 96A lightning protection installations and light pole applications. The housing is constructed of UV-stabilized thermoplastic and meets the UL 50 Type 4x rating, making it ideal for both indoor and outdoor applications. All of the models have a 20kA nominal discharge current rating, the highest level recognized under the UL 1449 Edition 4 standard.

SES200

TRANSIENT DISCRIMINATING SERVICE ENTRANCE SUPPRESSOR

Features

- 200kA 8/20 μ s primary protection – rated for service entrance applications
- NEMA®-4X enclosure – for harsh environments
- Internal high interrupt capacity fusing – for added safety
- Modular design – allows easy replacement of surge modules
- Built in disconnect and fusing eliminates need for external fusing
- Transient Discriminating (TD) Technology – provides increased service life
- Optional Filter and Surge Counter – for enhanced protection
- UL® 1449 4th Edition

The SES200 series of Transient Voltage Surge Suppressors deliver specification grade performance and features at an affordable price. The versatile and compact design provides high quality protection for a wide variety of commercial and industrial applications where sensitive electronic equipment is to be protected.

Internal electronics continuously monitor SPD protection, and the status is displayed on 5 segment LED bar graphs. Alarm contacts for remote monitoring are a standard feature.

The SES200 provides up to 200kA 8/20 μ s per mode of surge material, making it ideal for the protection of service entrance panels and helping to ensure a long operational life under severe lightning conditions.

The replaceable surge modules provide protection to L-N and N-G modes, delivering effective protection from both common mode and differential transients in single phase and three phase WYE systems. Models for grounded delta power systems provide L-L protection.

Transient Discriminating (TD) Technology, which meets the safety standards of UL 1449 Edition 4, provides a superior life by eliminating the common temporary over-voltage failure mode of most SPDs.

The SES is designed to mount adjacent to the service entrance panel with the connection being made via a small length of conduit.

SES200 metal enclosure option

SES200 without filter or surge counter options

Note: Ensure that installation of this model of the SES200 is not exposed to direct sunlight as solar radiation may cause internal temperatures to exceed the maximum specified and damage will result to the surge protective modules. A sun shield should be fitted if this unit is to be installed outdoors and exposed to sunlight.

TDXM Modular Series

TDX400S TRANSIENT DISCRIMINATING PANEL PROTECTION

Features

- Transient Discriminating (TD) Technology provides increased service life
- Modular design allows individual modes to be field replaceable, built-in disconnect and fusing eliminates need for external fusing
- Built-in features include TD Technology, thermal protection, short circuit current cartridge fusing and a surge counter
- Status indication flag per mode, voltage presence LED's, audible alarm and voltage-free contacts providing remote status monitoring
- Available in various operating voltages to suit most common power distribution systems
- 400kA 8/20 μ s maximum surge rating provides protection suitable for service entrance, main-distribution panels and highly exposed applications
- CE, UL® 1449 Edition 4 Listed

The TDX400 Series of Transient Voltage Surge Suppressors is designed for critical protection applications. The 400kA 8/20 μ s of surge protection exceeds the IEEE® C62.41.2 Scenario II single shot surge rating requirements for exposed service entrance locations – Exposure 3.

The NEMA®-12/3R weather-tight housing allows the TDX to be installed on indoor panels.

The preconfigured connecting leads simplify installation.

The unique narrow construction allows the SPD to fit between adjacent panel boards and connect via a 90-degree elbow.

Listed as a Type 1 SPD to UL 1449 Edition 4, the TDX400 Series can be installed within a Type 1 or 2 location in accordance with the NEC® 2017, Article 285.

TDXM Modular Series

TDX100 TRANSIENT DISCRIMINATING PANEL PROTECTION

Features

- Transient Discriminating (TD) Technology provides increased service life
- Modular design allows individual modes to be field replaceable, built-in disconnect and fusing eliminates need for external fusing
- Built-in features include TD Technology, thermal protection and short circuit current cartridge fusing
- Compact NEMA®-4 enclosure design can be flush mounted or installed in a small space
- Status indication flag per mode, voltage presence LEDs, audible alarm and voltage-free contacts providing remote status monitoring
- 100kA 8/20μs maximum surge rating provides protection suitable for smaller main-distribution panels and an extended operational life
- Available in various operating voltages to suit most common power distribution systems
- CE, UL® 1449 Edition 4 Listed, CSA-22.2 (347/600v model)

The TDX100 Series of Transient Voltage Surge Suppressors is designed for critical protection applications. The 100kA 8/20μs of surge protection meets the IEEE® C62.41.2 Scenario II single shot surge rating requirements for exposed service entrance locations – Exposure 3.

The NEMA-4 weather tight housing allows the TDX to be installed on indoor or outdoor service panels. The preconfigured

connecting leads simplify installation. The unique narrow construction allows the SPD to fit between adjacent panel boards and connect via a 90-degree elbow. A flush mounting kit is also available for installing the SPD in drywall applications.

Listed as a Type 1 SPD to UL 1449 Edition 4, the TDX100 Series can be installed within a Type 1 or 2 location in accordance with the NEC® 2017.

TDXC Compact Series

TDX50C TRANSIENT DISCRIMINATING PANEL PROTECTION

Features

- Transient Discriminating (TD) Technology provides increased service life
- Built-in features include TD Technology, thermal protection and short circuit current fusing
- Compact NEMA®-4 enclosure design can be flush mounted or installed in a small space
- LED status indication and voltage-free contacts provide remote status monitoring
- 50kA 8/20µs maximum surge rating provides protection suitable for sub-distribution panels and a long operational life
- Available in various operating voltages to suit most common power distribution systems
- CE, UL® 1449 Edition 4 Listed, CSA-22.2

The TDX50 Series of Transient Voltage Surge Suppressors for equipment, panel and motor protection applications is specifically designed to provide long life, even under the most adverse over-voltage conditions.

The NEMA®-4 weather tight housing allows the TDX to be installed on indoor or outdoor service panels. The preconfigured

connecting leads simplify installation.

The unique narrow construction allows the SPD to fit between adjacent panel boards. A flush mounting kit is also available for installing the SPD in drywall applications.

Listed as a Type 1 SPD to UL 1449

DT1 DIN Rail Surge Protection IEC Class I+II, 3+0 Mode

Features

- Compact, yet high surge rated pluggable design, using minimum DIN rail width
- Retaining clip ensures enhanced vibration and shock resistance performance
- Red/Green status indication and change-over contacts standard for remote monitoring

Certification Details: IEC 61643-11 Class I+II
EN 61643-11 Type 1+2
UL 1449, 4th Edition Type 1CA

Complies with: IEC 61643-11:2011
EN 61643-11:2012
UL 1449, 4th Edition
CSA C22.2 No. 269-4

Protection Modes: L-PE, N-PE, L-L

EDT2 Enhanced Din Rail Surge Protection

IEC Class II, 1+0 Mode

Features

- Compact, yet high surge rated pluggable design, using minimum DIN rail width
- Retaining clip ensures enhanced vibration and shock resistance performance
- Red/Green status indication and change-over contacts standard for remote monitoring

Certification Details:	IEC 61643-11 Class I+II EN 61643-11 Type 1+2 UL 1449, 4th Edition Type 1CA
Complies with:	IEC 61643-11:2011 EN 61643-11:2012 UL 1449, 4th Edition CSA C22.2 No. 269-4
Protection Modes:	L-N, N-PE, L-L

EDT2 Enhanced DIN Rail Surge Protection

IEC Class II, 2+0 Mode

Features

- Includes nVent ERICO TD Technology to ensure reliability throughout adverse voltage conditions
- Enhanced temporary over voltage (TOV) withstand capability
- Compact, yet high surge rated pluggable design, using minimum DIN rail width
- Retaining clip ensures enhanced vibration and shock resistance performance
- Red/Green status indication and change-over contacts standard for remote monitoring

PVT1 Photovoltaic Surge Protection Class I

Features

- Uniquely designed for protection of centralized solar inverters on the DC input side and string boxes
- Thermal protection included to ensure safe failure modes
- Compact, yet high surge rated pluggable design, using minimum DIN rail width

Part Number	PVT11000R	PVT11500R
Max Continuous Operating Voltage (Ucpv)	1,100 V	1,500 VDC
Nominal Discharge Current (In), IEC	20 kA 8/20 μ s	
Impulse Current (Iimp)	6.25 kA 10/350 μ s	5.00 kA 10/350 μ s
Total Discharge Current (Itotal)	12.5 kA 10/350 μ s; 50.0 kA 8/20 μ s	10.0 kA 10/350 μ s; 40.0 kA 8/20 μ s
Voltage Protection Level (Up)	4,000 V	5,000 V
Response Time	25 ns Max	
Short Circuit Current Rating (Iscrr)	11 kA	
Max Continuous Operating Voltage (Vpdc)	1,100 VDC	1,500 VDC
Voltage Protection Rating (VPR)	2,500 V	4,000 V
Nominal Discharge Current (In), UL	20 kA 8/20 μ s	
Short Circuit Current Rating (SCCR)	50 kA	65 kA
Protection Modes	-ve to PE; -ve to +ve; +ve to PE	
Altitude	6,562' Max	
Humidity	5 – 95 % RH	
Temperature	-40 to 85 °C	
Connection, Flexible	#4	
Connection, Solid	#2	
Connection, Stranded	#2	
Enclosure Material	UL® 94V-0 Thermoplastic	
Enclosure Rating	IP 20	
Mounting	35 mm top hat DIN rail	
Torque (TQ)	3.3 ft lb Max	
Remote Contact Switching Capacity	1.0 A @ 125 VAC; 1.0 A @ 250 VAC; 0.5 A @ 12 VDC; 0.5 A @ 24 VDC; 0.5 A @ 48 VDC	
Remote Contacts	Yes	
Status Indication	Mechanical flag	
Depth (D)	3.35"	
Height (H)	3.54"	
Width (W)	2.13"	
Unit Weight	1.02 lb	1.10 lb
Replacement Module	PVT1500M; PVT1500SM	PVT1750M; PVT1750SM
Certification Details	UL® 1449 Edition 4 Type 1CA	
Complies With	EN 50539-11 Type 1, Type 2	

PVT2 Photovoltaic Surge Protection Class II

Features

- Suited for use at the DC input of distributed string inverters in solar arrays
- Thermal protection included to ensure safe failure modes
- Compact, yet high surge rated pluggable design, using minimum DIN rail width

Part Number	PVT21000R	PVT21500R
Max Continuous Operating Voltage (Ucpv)	1,100 V	1,500 VDC
Nominal Discharge Current (In), IEC	20 kA 8/20 μ s	
Max Discharge Current (Imax)	40 kA 8/20 μ s	30 kA 8/20 μ s
Total Discharge Current (Itotal)	50 kA 8/20 μ s	40 kA 8/20 μ s
Voltage Protection Level (Up)	4,000 V	5,000 V
Response Time	25 ns Max	
Short Circuit Current Rating (Iscrr)	11 kA	
Max Continuous Operating Voltage (VpvdC)	1,100 VDC	1,500 VDC
Voltage Protection Rating (VPR)	3,000 V	4,000 V
Nominal Discharge Current (In), UL	20 kA 8/20 μ s	
Short Circuit Current Rating (SCCR)	50 kA	65 kA
Protection Modes	-ve to PE; -ve to +ve; +ve to PE	
Altitude	6,562' Max	
Humidity	5 – 95 % RH	
Temperature	-40 to 185 °F	
Connection, Flexible	#4	
Connection, Solid	#2	
Connection, Stranded	#2	
Enclosure Material	UL® 94V-0 Thermoplastic	
Enclosure Rating	IP 20	
Mounting	35 mm top hat DIN rail	
Torque (TQ)	3.3 ft lb Max	
Remote Contact Switching Capacity	1.0 A @ 125 VAC; 1.0 A @ 250 VAC; 0.5 A @ 12 VDC; 0.5 A @ 24 VDC; 0.5 A @ 48 VDC	
Remote Contacts	Yes	
Status Indication	Mechanical flag	
Depth (D)	2.72"	
Height (H)	3.54"	
Width (W)	2.13"	
Unit Weight	0.9 lb	1.0 lb
Replacement Module	PVT2500M	PVT2750M
Certification Details	UL® 1449 Edition 4 Type 1CA	
Complies With	EN 50539-11 Type 1, Type 2	

Transient Discriminating Surge Diverter, 20 kA Three Mode

Features

- 20 kA 8/20 μ s surge rating provides robust surge protection
- TD Technology with thermal disconnect protection
- Compact package, modular DIN rail mounting for limited space requirements
- Three modes of protection: L-N, L-PE and N-PE
- Indication flags and voltage-free contacts provide remote status monitoring
- Separate plug and base design facilitates replacement of a failed surge module

Part Number	TDS1301T150	TDS1301T240	TDS1301TR150	TDS1301TR240
Nominal System Voltage (Un)	120 - 150 VAC	220 - 240 VAC	120 - 150 VAC	220 - 240 VAC
Max Continuous Operating Voltage (Uc)	170 VAC	275 VAC	170 VAC	275 VAC
Stand-off Voltage	230 VAC	440 VAC	230 VAC	440 VAC
Voltage Protection Rating (VPR)	800 V @ 3 kA L-N 500 V @ 3 kA L+N-PE	1,500 V @ 3 kA L-N 800 V @ 3 kA L+N-PE	800 V @ 3 kA L-N 500 V @ 3 kA L+N-PE	1,500 V @ 3 kA L-N 800 V @ 3 kA L+N-PE
Nominal Discharge Current (In), Per Mode	8 kA 8/20 μs			
Max Discharge Current (Imax)	20 kA 8/20 μs L-N, 20 kA 8/20 μs L-PE			
Back-Up Overcurrent Protection	63 A			
Short Circuit Current Rating (SCCR)	200 kA			
Frequency	0 – 100 Hz			
Protection Modes	L-N L-PE N-PE			
Response Time	5 ns Max			
Technology	TD technology with thermal disconnect			
Connection, PE Solid	#2 Max			
Connection, PE Stranded	#4 Max			
Connection, Solid	#10 Max			
Connection, Stranded	#10 Max			
Mounting	35 mm top hat DIN rail			
Enclosure Material	UL® 94V-0 Thermoplastic			
Enclosure Rating	IP 20 NEMA®-1			
Remote Contacts	No		Yes	
Status Indication	Mechanical flag			
Temperature	-40 to 176 °F			
Module Width	1 M			
Depth (D)	2.68"			
Height (H)	3.54"			
Width (W)	0.71"			
Unit Weight	0.26 lb			
Certification Details	UL® 1449 Edition 3 Type 2, 3 kA Mode			
Complies With	ANSI®/IEEE® C62.41.2-2002 Cat A, Cat B IEC® 61643-1 Class III			
Replacement Module	TDS130M150	TDS130M240	TDS130M150	TDS130M240

Surge Diverter, 24/48 DC

Features

- 40 kA 8/20 μ s surge rating per mode, 80 kA per line, 120 kA total per pair
- Suitable for exposed DC wiring
- Indication flag provides clear visual indication of life status
- Suitable for both 24 VDC and 48 VDC distribution systems

Part Number	DSD1402BR24/48
Nominal System Voltage (Un)	0 - 48 VDC
Max Continuous Operating Voltage (Uc)	60 VAC; 60 VDC
Max Discharge Current (Imax), Per Mode	40 kA 8/20 μ s
Nominal Discharge Current (In)	20 kA 8/20 μ s
Voltage Protection Level (Up), + to - @ In	600 V
Voltage Protection Level (Up), L-N	280 V @ 3 kA
Frequency	0 – 60 Hz
Protection Modes	Common Differential
Short Circuit Current Rating (SCCR)	25 kA
Technology	MOV with thermal disconnect
Connection, Solid	#2 Max
Connection, Stranded	#4 Max
Mounting	35 mm top hat DIN rail
Enclosure Material	UL® 94V-0 Thermoplastic
Enclosure Rating	IP 20 NEMA®-1
Status Indication	Mechanical flag
Terminal Torque	31 ft lb Max
Remote Contacts	Yes
Temperature	-40 to 176 °F
Module Width	2 M
Depth (D)	2.68"
Part Number	DSD1402BR24/48
Height (H)	3.54"
Width (W)	1.42"
Unit Weight	0.45 lb
Complies With	ANSI®/IEEE® C62.41.2-2002 Cat A, Cat B, Cat C; ANSI®/IEEE® C62.41.2-2002 Scenario II, Exposure 2, 20 kA 8/20 μ s, 2 kA 10/350 μ s IEC® 61643-1 Class II
Certifications	CE, DSD140; Qualifoudre
Standard Packaging Quantity	1 pc
UPC	78285652474
EAN-13	8711893029802

Transient Surge Filter

Features

- Compact, space saving design
- Replaceable surge module reduces down time and unprotected time during maintenance
- Compliance to the latest UL 1449 Edition 4 and IEC 61643-11 surge standards and UL 1283 Electromagnetic Interference Filters (EMI) standard
- Low let-through voltages on the critical line to neutral mode
- Transient Discriminating (TD) Technology provides increased service life
- All modes protected at 20 kA 8/20 μ s
- Form C Relay Contacts for Remote Monitoring
- Two Terminals per line

Specification	TSF6A24V	TSF6A120V	TSF20A120V	TSF6A240V	TSF20A240V

Rated Load Current (IL)	6 A		20 A	6 A	20 A
Max Continuous Operating Voltage (Uc)	30 VAC/38 VDC	170 V		275 V	
Stand-off Voltage	–	230		440	
Filtering	-65 dB @ 100 kHz		-50 dB @ 100 kHz	-65 dB @ 100 kHz	-50 dB @ 100 kHz
Frequency	0 – 100 Hz				
Max Discharge Current (Imax)	20 kA 8/20 μs, all modes				
Voltage Protection Rating (VPR) L-N	–	330v	400v	–	–
Measured Limiting Voltage (MLV) L-N	–	–	–	620v	680v
Nominal Discharge Current (In)	3 kA 8/20 μs, all modes				
Distribution System	1Ph 2W+G				
Connection, Solid	2.5 mm² - 6.0 mm²; #14 - #10				
Connection, Stranded	2.5 mm² - 6.0 mm²; #14 - #10				
Mounting	35 mm top hat DIN rail				
Status Indication	Mechanical flag				
Enclosure Material	UL® 94V-0 Thermoplastic				
Enclosure Rating	IP 20				
Temperature	-31 – 104 °F				
Module Width	3 M				
Depth (D) x Height (H) x Width (W)	95 mm x 123 mm x 54 mm				
Unit Weight	508 grams				
Replacement Module	TSF24MDS	TSF120MTDS		TSF240MTDS	
Certifications	CE	CE, cURus			

Surge Reduction Filter N-Series, Single Phase

Features

- High-performance protection incorporating Spark Gap and Transient Discriminating (TD) technologies
- High surge rating ideal for exposed critical service entrance applications
- Reduces let-through voltages and rate-of-voltage rise (dv/dt) and helps provide optimum protection for electronic equipment
- Extreme reliability and simplified design with direct connection from input to output
- Comprehensive front panel status and internal diagnostic LEDs

Specification	SRF163N	SRF1125N
Nominal System Voltage (Un)	220 - 240 VAC	
Distribution System	1Ph 2W+G	
System Compatibility	TN-C, TN-C-S, TN-S, TT	
Frequency	50 – 60 Hz	
Short Circuit Current Rating (SCCR)	43 kA	
Heat Dissipation	25 W	
Filtering	-40 dB @ 100 kHz	
Protection Modes	All modes protected	
Technology	Spark Gap, In-line series low pass sine wave filter, TD technology with thermal disconnect (50 kA 8/20us secondary stage)	
Enclosure Material	Metal	
Enclosure Rating	IP 65	
Mounting	Wall mount	
Status Indication	Front panel LED, Internal diagnostic primary and secondary protection LEDs, Change-over contact (Form C dry), 250 VAC/30 VDC/5 A, 4 kV isolation	
Rated Load Current (IL)	63 A	125 A
Rate of Voltage Rise (dv/dt)	3 V/μs Max	8 V/μs Max
Input Connection	10 - 35 mm ²	25 - 120 mm ²
Output Connection	25 - 120 mm ²	
Depth (D)	200 mm	
Height (H)	300 mm	
Width (W)	400 mm	
Unit Weight	10.3 kg	12.3 kg
Complies With	IEC® 61643-11 Class I, Class II ANSI®/IEEE® C62.41.2-2002 Cat A, Cat B, Cat C ANSI®/IEEE® C62.41.2-2002 Scenario II, Exposure 3, 100 kA 8/20 μs, 10 kA 10/350 μs	

Surge Reduction Filter N-Series, Three Phase

Features

- High-performance protection incorporating Spark Gap and Transient Discriminating (TD) technologies
- High surge rating ideal for exposed critical service entrance applications
- Reduces let-through voltages and rate-of-voltage rise (dv/dt) and helps provide optimum protection for electronic equipment
- Extreme reliability and simplified design with direct connection from input to output
- Comprehensive front panel status and internal diagnostic LEDs

Specification	SRF363N	SRF3125N	SRF3250N	SRF3500N	SRF3800N
Nominal System Voltage (Un)	220/380 - 240/415 VAC				
Distribution System	3Ph Y 4W+G				
System Compatibility	TN-C, TN-C-S, TN-S, TT				
Frequency:	50 – 60 Hz				
Short Circuit Current Rating (SCCR)	43 kA				
Filtering	-40 dB @ 100 kHz				
Protection Modes	All modes protected				
Technology	Spark Gap, In-line series low pass sine wave filter, TD technology with thermal disconnect (50 kA 8/20us secondary stage)				
Enclosure Material	Metal				
Mounting	Wall mount				
Status Indication	Front panel LED, Internal diagnostic primary and secondary protection LEDs, Change-over contact (Form C dry), 250 VAC/30 VDC/5 A, 4 kV isolation				
Rated Load Current (IL)	63 A	125 A	250 A	500 A	800 A
Heat Dissipation	34 W	56 W	98 W	215 W	260 W
Rate of Voltage Rise (dV/dt)	5 V/μs Max	10 V/μs Max	11 V/μs Max	10 V/μs Max	
Input Connection	10 - 35 mm ²	25 - 120 mm ²		10 mm Stud	(2) 10 mm studs
Output Connection	10 - 35 mm ²	25 - 120 mm ²		10 mm Stud	(2) 10 mm studs
Enclosure Rating	IP 65			IP 32	
Depth (D)	200 mm			300 mm	
Height (H)	500 mm		800 mm	1000 mm	1200 mm
Width (W)	400 mm		600 mm	800 mm	
Unit Weight	17.7 kg	21.6 kg	41.7 kg	76.6 kg	97.2 kg
Complies With	IEC® 61643-11 Class I, Class II ANSI®/IEEE® C62.41.2-2002 Cat A, Cat B, Cat C ANSI®/IEEE® C62.41.2-2002 Scenario II, Exposure 3, 100 kA 8/20 μs, 10 kA 10/350 μs				

High Speed Data Line Protector

Features

- Multi-stage protection with primary or combination primary/secondary protectors
- 10 pair protector
- Provides both L-L and L-PE protection modes for comprehensive protection Simple installation into Krone® LSA disconnect block
- Data Line Terminator (DLT) available where screw terminal connections are required

Specification	HSP10K12	HSP10K36	HSP10K72	HSP10K230
Max Continuous Operating Voltage (Uc)	13 VDC	40 VDC	65 VDC	190 VDC
Max Discharge Current (Imax), L+L-PE	20 kA 8/20 μs			
Rated Load Current (IL)	150 mA			
Frequency	12 MHz Max			
Transmission Rate	8 Mb/s			
Protection Modes	L-L, L-PE			
Technology	Multi-stage			
Connection Type	Krone® LSA-PLUS			
Impedance Balance	55 dB Max			
Insertion Loss	.4 dB Max			
Return Loss	20 dB Max			

Subscriber Line Protector, Single Stage

Features

- Single stage protection with primary or combination primary/secondary protectors
- 10 pair protector
- Simple installation into Krone® LSA disconnect block
- Data Line Terminator (DLT) available where screw terminal connections are required

Specification	SLP10K1F
Max Continuous Operating Voltage (Uc)	190 VDC
Max Discharge Current (Imax), L+L-PE	20 kA 8/20 μ s
Rated Load Current (IL)	1,000 mA
Frequency	12 Hz Max
Transmission Rate	8 Mb/s
Protection Modes	L-L
Technology	Single-stage
Connection Type	Krone® LSA-PLUS
Impedance Balance	48 dB Max
Insertion Loss	.75 dB Max
Return Loss	22 dB Max
Loop Resistance	0.2 Ω
Temperature	-20 to 60 °C
Enclosure Material	UL® 94V-0 Thermoplastic
Depth (D)	21 mm
Height (H)	34.5 mm
Width (W)	125 mm
Unit Weight	22.7 g
Certification Details	UL 497
Certifications	RCM, CE, cULus
Standard Packaging Quantity	1 pc
UPC	78285647508
EAN-13	9321098000460

Telephone Line Protector

Features

- RJ11 sockets provide simple plug-in connection for 4 or 6 position RJ plugs
- Includes patch cord and adhesive mounting strips
- Provides both L-L and L-PE protection modes for comprehensive protection
- Automatic over-current protection

Specification	SLP1RJ11A
Max Continuous Operating Voltage (Uc)	280 V
Max Discharge Current (Imax), Per Mode	20 kA 8/20 μs
Voltage Protection Level (Up), T-R	110 V
Voltage Protection Level (Up), T/R-G	500 V @ 125 A
Rated Load Current (IL)	120 mA
Connection Type	RJ11
Ground Lead Length	152 mm
Lead Size	1.0 mm ² ; #18
Temperature	-40 to 65 °C
Depth (D)	27.9 mm
Height (H)	38.1 mm
Width (W)	77.7 mm
Unit Weight	49.9 g
Enclosure Material	UL® 94V-0 Thermoplastic
Certifications	RCM, NOM, UL

Coaxial Surge Protector

SPECIFICATIONS

Max Discharge Current (I_{max}), Per Mode: 20 kA 8/20 μ s

Frequency: 0 – 3 GHz

Capacitance: 1.5 pF

Insulation Resistance: 10 G Ω

Impulse Life: 400 @
500 A 10/1000 μ s

Enclosure Material: Metal

Enclosure Rating: IP 20; NEMA®-1

Temperature: -40 to 90 °C

Features

- Simple plug-in installation
- Supplied with mounting bracket and flying lead ground
- Low insertion and return loss
- Wide operating frequency spectrum
- Low spark over voltage, better clamping
- Field-serviceable with replaceable GDT arrestor

Part Number	Connection Type	Spark-Over Voltage @ 100 V/ μ s	Spark-Over Voltage @ 100 V/s	Depth D	Height H	Width W	Unit Weight

Closed Circuit Television Protector

Features

- Robust high energy protection
- Compact package for limited space requirements
- Isolated ground prevents introduction of unwanted noise

Specification	CCTV12
Nominal System Voltage (Un)	+/- 12 VDC
Max Continuous Operating Voltage (Uc)	+/- 14 VDC
Voltage Protection Level (Up)	60 V @ 5 kA
Nominal Discharge Current (In)	10 kA 8/20 µs
Frequency	100 MHz Max
Transmission Rate	16 Mb/s
Impedance	50 – 75 Ω
Connection Type	BNC, Female
Mounting	In-line insertion
Temperature	-25 to 70 °C
Enclosure Material	Metal
Enclosure Rating	IP 20 NEMA®-1
Depth (D)	27.9 mm
Height (H)	90 mm
Width (W)	22.1 mm
Unit Weight	60 g
Standard Packaging Quantity	1 pc
UPC	78285647021
EAN-13	8711893014204

Community Antenna Protector, High Frequency

Features

- Robust high energy protection for cable television systems
- Compact package for limited space requirements
- Isolated ground prevents introduction of unwanted noise
- Optional mounting plate included

Part Number	CATVHF1
Clamping Voltage	180 VDC
Nominal Discharge Current (In)	5 kA 8/20 μs
Frequency	0 – 1,000 MHz
Impedance	50 – 75 Ω
Insertion Loss	1 Db Max @ 500 MHz 2 Db Max @ 750 MHz
Connection Type	F-Type, Female
Temperature	-40 to 185 °F
Depth (D)	1 1/2"
Height (H)	1 1/4"
Width (W)	4 1/2"
Unit Weight	0.063 lb
Standard Packaging Quantity	1 pc
UPC	78285690879

LAN Surge Protector

Features

- Rugged, metallic enclosure provides both environmental and electrical shielding
- Up to CAT6 and POE (Power Over Ethernet) protection in one product
- Simple, bi-directional installation

Specification	LANRJ45C6P
Nominal System Voltage (Un)	48 VDC
Max Continuous Operating Voltage (Uc)	50 VDC
Voltage Protection Rating (VPR), L-L	150 V
Voltage Protection Rating (VPR), L-PE	550 V
Nominal Discharge Current (In), L-L	150 A 8/20 μ s
Max Discharge Current (Imax), L-PE	10 kA 8/20 μ s
Impulse Current (Iimp)	1 kA 10/350 μ s
Rated Load Current (IL)	1 A
Frequency	250 MHz Max
Baud Rates	10, 100, 1000, 10000 Mbps
Temperature	-40 to 80 °C
Connection Type	RJ45
Enclosure Material	Metal
Enclosure Rating	IP 20
Depth (D)	45.5 mm
Height (H)	75 mm
Width (W)	19 mm
Complies With	IEC® 61643-21 UL 497B Ed. 4
Standard Packaging Quantity	1 pc
UPC	78285693008
EAN-13	0782856930082

Data Equipment Protector

- Features**
- Models to cover RS-232, RS-423, RS-422 and RS-485 protocols
 - Designed to provide both line to signal-ground and signal-ground to protective-earth protection
 - Plug-in protection is simple to install

Part Number	DEPRS2322525D	DEPRS23299D	DEPRS42299D
Nominal Discharge Current (In)	300 A 8/20 μs		400 A 8/20 μs
Max Continuous Operating Voltage (Uc)	15 VDC		6 VDC
Capacitance	30 pF Max		
Protection Modes	All pins to ground		
Connection Type	DB25, Male/Female	DB9, Male/Female	
Depth (D)	2.4"		
Height (H)	0.66"		
Width (W)	2.11"	1.20"	
Unit Weight	0.17 lb	0.12 lb	

Universal Transient Barrier, Single Pair

Features

- Compact design universal transient barrier provides protection of low-voltage circuits and transducers
- Separate plug and base design allows hot swappable module replacement
- Multi-stage protection and fine over-voltage protection helps ensure lowest residual surge voltages reach sensitive equipment
- Common-mode and differential-mode protection protects against both possible surge conditions
- Surge rating to 20 kA 8/20 μ s is ideal for exposed wiring
- Allows for protection of 25 analog signals or 50 digital signals per linear foot (0,3 m) of DIN rail space

Specification	UTB5SP	UTB15SP	UTB30SP	UTB60SP	UTB110SP
Nominal System Voltage (Un)	0 - 3 VAC 0 - 5 VDC	3 - 10 VAC 5 - 15 VDC	10 - 21 VAC 15 - 30 VDC	21 - 42 VAC 30 - 60 VDC	100 - 120 VAC 60 - 154 VDC
Max Continuous Operating Voltage (Uc)	5 VAC 7 VDC	12 VAC 18 VDC	23 VAC 33 VDC	45 VAC 64 VDC	150 VAC 170 VDC
Frequency	0.5 MHz	1.0 MHz	2.0 MHz	3.0 MHz	3.0 MHz
Rated Load Current (IL)	2A				
Loop Resistance	1 Ω				
Max Discharge Current (Imax), L+L-PE	20 kA 8/20 μ s				
Protection Modes	Common, Differential				
Technology	Gas Discharge Tube (GDT), Metal Oxide Varistor (MOV), Silicon Avalanche Diode (SAD)				
Connection, Stranded	1.0 mm ² - 4.0 mm ² ; #18 - #12				
Mounting	35 mm top hat DIN rail				
Temperature	-20 to 65 °C				
Enclosure Material	UL® 94V-0 Thermoplastic				
Enclosure Rating	IP 20, NEMA®-1				
Depth (D)	72 mm				
Height (H)	90 mm				
Width (W)	12 mm				
Unit Weight	68 g				
Certification Details	UL® 497B				
Complies With	ANSI®/IEEE® C62.41.2-2002 Cat A, Cat B, Cat C				
Voltage Protection Level (Up), L-L	10 V @ 3 kA	25 V @ 3 kA	44 V @ 3 kA	85 V @ 3 kA	220 V @ 3 kA

Universal Transient Barrier, Modem/Telephone

Features

- General purpose barrier provides protection of low-voltage circuits and transducers
- Separate plug and base design allows hot swappable module replacement
- Multi-stage protection and fine over-voltage protection helps ensure lowest residual surge voltages reach sensitive equipment

Specification	UTBSA
Max Continuous Operating Voltage (Uc)	5 VAC 7 VDC
Frequency	15 MHz
Voltage Protection Level (Up), L-L	340 V @ 3 kA
Rated Load Current (IL)	160 mA
Loop Resistance	1 Ω
Max Discharge Current (Imax), L+L-PE	20 kA 8/20 μ s
Protection Modes	Common, Differential
Technology	Gas Discharge Tube (GDT), PTC
Connection, Stranded	1.0 mm ² - 4.0 mm ² ; #18 - #12
Mounting	35 mm top hat DIN rail
Temperature	-20 to 65 °C
Enclosure Material	UL® 94V-0 Thermoplastic
Enclosure Rating	IP 20, NEMA®-1
Depth (D)	68 mm
Height (H)	90 mm
Width (W)	17.8 mm
Unit Weight	99.8 g
Certification Details	UL® 497B
Complies With	ANSI®/IEEE® C62.41.2-2002 Cat A, Cat B, Cat C
Replacement Module	UTBSM
Certifications	CE NOM

Remote Transmitter Protector

Features

- Three stage protection and fine over-voltage protection helps ensure lowest residual surge voltage reaches sensitive equipment
- Flexible installation allows enclosure to be installed "dead ended", "T" configured or in-line
- Optimized for protection of 2-wire industrial 4-20mA loops and suitable for exposed locations
- Supports line currents up to 145mA and protects 24VDC powered equipment

Part Number	RTP3034
Nominal System Voltage (Un)	21 VAC 30 VDC
Max Continuous Operating Voltage (Uc)	23 VAC 33 VDC
Voltage Protection Level (Up), L-L	44 V @ 3 kA
Max Discharge Current (Imax), L+L-PE	20 kA 8/20 μ s
Rated Load Current (IL)	145 mA
Loop Resistance	14 Ω
Protection Modes	Common Differential
Technology	Gas Discharge Tube (GDT); Metal Oxide Varistor (MOV); Silicon Avalanche Diode (SAD)
Enclosure Material	Stainless Steel
Enclosure Rating	IP 55
Temperature	-40 to 149 °F
Thread Size (TS)	3/4 NPT
Diameter (Ø)	1.38"
Height (H)	5"
Designed to Meet	ANSI®/IEEE® C62.41.2-2002 Cat A, Cat B, Cat C
Certifications	CE; Qualifoudre
Standard Packaging Quantity	1 pc
UPC	78285652666
EAN-13	8711893027549

Load Cell Protector

Features

- Six wires and shield protection works with four or six wire systems
- Suitable for compression or tension cells
- Low series impedance, loadcells do not need recalibration
- NEMA®-12 (IP-55) rated, suitable for outdoor use
- Helps protect against excitation over-voltage and prevent loadcell damage

Part Number	LCP01A
Max Discharge Current (Imax), Shield to Ground	10 kA 8/20 µs
Max Discharge Current (Imax), Signal to Shield	0.3 kA 8/20 µs
Voltage Protection Level (Up), Shield to Ground	90 V
Voltage Protection Level (Up), Signal to Shield	30 V
Voltage Protection Level (Up), Signal to Signal	15 V
Loop Resistance	0.3 Ω
Technology	Silicon Avalanche Diode (SAD)
Material	Acrylonitrile Butadiene Styrene
Enclosure Rating	NEMA® 12 (IP55)
Depth (D)	4.33"
Height (H)	2.2"
Width (W)	2.95"
Unit Weight	0.55 lb
Temperature	-40 to 176 °F
Certifications	Qualifoudre
Standard Packaging Quantity	1 pc
UPC	78285644014
EAN-13	9321098000804

NEMA is a registered service mark of National Electrical Manufacturers Association.

Surge Counter, Digital Display

Features

- Records time and date of transient surge events
- Resettable counter
- Snap on, hall effect transducer

Part Number	DSCL2
Trip Threshold	100 A 8/20 μ s
Status Indication	LED
Connection, Stranded	2/0 Max
Lead Length	20"
Enclosure Material	UL [®] 94V-0 Thermoplastic
Enclosure Rating	IP 20 NEMA [®] -1
Mounting	35 mm top hat DIN rail
Temperature	-4 to 158 °F
Module Width	2 M
Depth (D)	2.68"
Height (H)	3.54"
Width (W)	1.42"
Unit Weight	0.42 lb
Standard Packaging Quantity	1 pc
UPC	78285680444
EAN-13	8711893146950

Potential Equalization Clamp

Features

- High peak current capability provides long service life
- Weatherproof enclosure is suitable for direct burial
- The PEC100 is ATEX approved and suitable for use in potentially explosive atmospheres

Part Number	PEC100
Spark-Over Voltage @ 100 V/s	350 V
Max Discharge Current (Imax)	100 kA 8/20 μ s
Technology	Gas Discharge Tube (GDT)
Insulation Resistance	1 G Ω Min
Capacitance	15 pF Max
Voltage Protection Level (Up)	800 V @ 1,000 V/ μ s
Impulse Current (Iimp)	25 kA 10/350 μ s
Lead Length	17"
Lead Size	#5
Enclosure Rating	IP 66; IP 67
Temperature	-22 to 158 °F
Diameter 1 (Ø1)	1.1"
Diameter 2 (Ø2)	0.64"
Length (L)	37 1/2"
Unit Weight	1.1 lb
Complies With	IEC® 61643-1 Class I, Class II IEC® 62561-3
Certifications	ATEX Baseefa13ATEX0113X CE; IECEx BAS 13.0065X; Qualifoudre
EAN-13	9321098000804
Standard Packaging Quantity	1 pc
UPC	78285656478
EAN-13	8711893027570

Spark-over voltage has a tolerance of +/- 20%.

IEC is a registered trademark of the International Electrotechnical Commission.

MOV/GDT/SAD Tester MGATESTER1

- Features**
- Measurement of metal oxide varistors, gas discharge tubes, and avalanche diodes
 - Ability to display up to 50 measurements
 - Adjustable test settings
 - Rechargeable battery

nVent ERICO testers are designed for rapid testing of the integrity of surge protection device components. Because standard metal oxide varistors, gas arresters, and avalanche diodes do not provide the user with a visual indication of the integrity of the protection capacity, an external means of testing is required. It is impossible to predict when these failures will occur without some form of

testing. As MOVs approach the end of their life cycle, they exhibit a change in tolerance levels. nVent ERICO testing products are specifically designed to identify these situations and allow the operator to effect remedial replacement to the devices which are nearing the end of their life cycle. They can test both components, as well as replacement modules such as the TDS or DSD

Part Number	MGATESTER1
Test Voltage	1,500 VDC Max
GDT Voltage Ramp	100 V/s 1,000 V/s
MOV/SAD Test Current	0.1 mA 0.5 mA 1.0 mA
Enclosure Rating	IP 20
Temperature	14 – 122 °F
Depth (D)	3.23"
Height (H)	8.07"
Width (W)	8.66"
Unit Weight	2.09 lb
Standard Packaging Quantity	1 pc
UPC	78285691000

Glossary of Terminology

8/20 μ s CURRENT WAVESHAPES

A current impulse with a virtual front time of 8 μ s and a time to half-value of 20 μ s.

AGGREGATE SURGE RATING

The sum of the surge ratings of individual voltage limiting components, connected in parallel, in the device.

Note: This figure does not indicate the maximum discharge current (I_{max}) of the device. It does however provide an indication of the expected SPD life. Users should be aware that certain manufacturers may incorrectly claim the aggregate surge rating of MOV material used in their device as its I_{max} . Non-perfect current sharing between parallel MOVs, and the inability of series over-current or thermal disconnects to carry the full surge current, generally means that the maximum discharge current which the SPD can withstand is less than its aggregate surge rating.

ATTENUATION

The ability of an SPD to reduce electrical noise interference, measured in decibels. Attenuation varies with frequency, so it is usual to specify the attenuation of the SPD at a particular frequency; commonly 100kHz.

BACKUP OVERCURRENT PROTECTION

An external overcurrent protective device installed prior to the SPD. Such a device may be required if the overcurrent limiting device on the service is larger than that required by the SPD or connecting wiring.

Class I test

SPD tested with maximum impulse current (I_{imp}) and nominal discharge current (I_n).

Class II test

SPD tested with maximum discharge current (I_{max}) and nominal discharge current (I_n).

Class III test

SPD tested with combination wave.

DISTRIBUTION SYSTEM

Defines the electrical power distribution system. The distribution system is usually described by configuration of the phases, neutral and ground conductor configuration on the secondary side of the supply transformer. Refer to pages 10-12 for further information.

FOLLOW CURRENT (I_f)

The current supplied by the electrical power distribution system which flows through the SPD after a discharge current impulse. The follow current is significantly higher than the operating current, and is normally high for voltage switching type SPDs (e.g. spark gaps) since the arc voltage falls below the AC supply voltage after firing.

IMPULSE CURRENT (I_{imp})

Peak impulse current withstand with a 10/350 μ s current waveshape. This is often used for the classification of SPDs tested to Test Class I, but is not the only acceptable waveshape.

INSERTION LOSS

The insertion loss of an SPD is usually only stated for two port devices for use on low voltage data systems. It is a measure of the ratio of voltage at the output to the input at the device under test. The insertion loss is usually stated for a given frequency and measured in decibels.

LEAKAGE CURRENT

The current flowing to the ground conductor when the SPD is connected to the nominal supply voltage U_n .

LET-THROUGH VOLTAGE

Another term often used to describe the measured limiting voltage.

Note: This measurement may be carried out with, or without, the presence of the nominal AC power (U_n) being applied to the SPD. As such, the results may be different and the user should take cognizance of this in making any comparative assessments.

LOCATION CATEGORIES

Various standards attempt to define the electrical environment at which an SPD may be installed, into location categories or zones.

Note: The user should be aware that international consensus has not been reached on these classifications, nor on the size of expected surge activity, which may occur. Further, the user should note that the demarcation of these zones do not form literal boundaries, but are rather a gradual transition.

MAXIMUM CONTINUOUS OPERATING VOLTAGE (U_c)

The maximum r.m.s. or d.c. voltage which may be continuously applied to the SPD's mode of protection without degradation or inhibiting its correct operation.

Note: Specifications given in the catalog generally are phase (L-N) voltages.

MAXIMUM DISCHARGE CURRENT (I_{max})

The maximum single shot current, having an 8/20 μ s waveshape, which the SPD can safely divert.

MEASURED LIMITING VOLTAGE

The maximum voltage measured across the SPD's terminals during the application of an impulse of specified waveshape and amplitude.

MODES OF PROTECTION

SPDs may provide protection line-to-ground, line-to-neutral, neutral-to-ground or in combinations thereof. These paths are referred to as the modes of protection.

Note: The user is advised that not all modes require protection, and more is not necessarily better when selecting an SPD. As an example, the N-G mode is not required when the SPD is installed at the primary service entrance of a TN-C-S electrical distribution system, due to the Neutral-Ground bond at this point. The L-L mode is generally not provided for systems with neutral conductors since the L-N modes also protect the L-L modes. Similarly, the L-G mode can be protected via the L-N and N-G modes.

NOMINAL DISCHARGE CURRENT (I_n)

The peak value of the current flowing through the SPD during the application an 8/20 μ s waveshape.

Note: IEC 61643-1 requires SPDs tested to Test Class II, to withstand 15 impulses at I_n followed by 0.1, 0.25, 0.5, 0.75 and 1.0 times I_{max} .

NOMINAL (SYSTEM) VOLTAGE (U_n)

The L-N voltage by which an electrical power system is designated. Under normal system conditions, the voltage at the supply terminals may differ from the nominal voltage as determined by the tolerance of the supply system (normally +/- 10%).

Glossary of Terminology

ONE-PORT SPD

An SPD connected in shunt (parallel) with the circuit to be protected. A one port device may have separate input and output terminals, but without a specific series impedance between these terminals. This type of connection is also known as a Kelvin connection. Operating Current

The current drawn (per phase) by the SPD when energized at the nominal operating voltage U_n .

Note: For SPDs with integral series filtering, the total current drawn may be greater than the real rms current consumption (i.e. VA may be greater than Watts). This is due to the presence of the internal filtering capacitance.

OVER-CURRENT PROTECTION

An over-current device, such as a fuse or circuit-breaker, which could be part of the electrical distribution system located externally and up-stream of the SPD. May provide protection to the SPD, the connecting wiring and provide a means of externally isolating the SPD.

PROTECTIVE EARTH (PE)

The IEC® 60364 series characterizes low-voltage distribution systems by their grounding methods and the configuration of the neutral and protective conductors. The Protective Earth is commonly referred to as "ground", or "earth", in many regions.

RATED LOAD CURRENT (I_L)

Maximum continuous rated current that can be supplied to a load connected to the protected output of an SPD. Normally only stated for two port, series connected, SPDs.

RESIDUAL VOLTAGE

In IEC terminology this refers to the peak value of the voltage that appears between the terminals of an SPD due to the passage of discharge current I_n . NZS/AS 1768 refers to this as the let-through voltage, a measurement obtained when the stated test impulse is superimposed on top of the nominal system voltage U_n .

SECONDARY SURGE ARRESTER

A loosely used term given to SPDs intended for operation on medium voltage systems (>1kV). Within the USA, a secondary surge arrester defines an SPD Listed by Underwriters Laboratories Inc. for use on LV and MV systems at locations prior to the main overcurrent disconnect to the facility.

Note: Secondary Surge Arrester Listing is generally considered to have less demanding safety requirements than those for UL® 1449 Transient Voltage Surge Arrester Listing.

SHORT CIRCUIT CURRENT RATING (SCCR)

The short-circuit current rating of the SPD. Required by USA National Electric Code (NEC®) for TVSS devices.

SPD DISCONNECTOR

An IEC term used to describe a device (internal and/or external) for disconnecting an SPD from the electrical power system.

Note: This disconnecting device is not required to have isolating capability. It is to prevent a persistent fault on the system and is used to give an indication of the SPD failure. There may be more than one disconnect function, for example an over-current protection function and a thermal protection function. These functions may be integrated into one unit or performed in separate units.

SPARK-OVER VOLTAGE

The voltage at which a switching type SPD (generally of the spark gap type) will initiate conduction. This value is normally specified for a voltage increasing at 1kV/s.

STATUS INDICATOR

A device(s) that indicates the operational status of the SPD, or of a particular mode of its protection.

Note: Such indicators may be local with visual and/or audible alarms and/or may have remote signaling and/or output contact capability.

SUPPRESSED VOLTAGE RATING (SVR)

A special case of the measured limiting voltage specific to the UL 1449 Listing of an SPD.

Note: This test is performed using a small 500A 8/20µs current limited impulse, and the clamping voltage recorded at the ends of 6" connecting leads. The result obtained is rounded up to the nearest value given in a table.

SURGE PROTECTION DEVICE (SPD)

An IEC term used to describe a device intended to limit transient over-voltages and divert surge currents. It contains at least one non-linear component.

SURGE (REDUCTION) FILTER

A two-port series filtering type of SPD specifically designed to reduce the rate-of-rise of voltage (dv/dt) of the pre-clamped waveform. Such a device normally contains a filter with low-pass performance.

TRANSIENT VOLTAGE SURGE SUPPRESSOR (TVSS)

An SPD tested to meet the safety requirements of UL 1449 - Standard for Transient Voltage Surge Suppressors. UL 1449 defines the basic safety requirements for TVSS devices installed on electrical circuits up to 600V. The United States National Electric Code (NEC) only permits TVSS devices to be installed after (downstream of) the main over-current disconnect to a facility.

TWO-PORT SPD

An SPD with two sets of terminals, input and output (line and equipment), and with a specific impedance inserted between these terminals. These are often referred to as series (in-line) connected SPDs and generally contain wave-shaping filters in addition to simple shunt-only protection.

VOLTAGE PROTECTION LEVEL (U_p)

Similar to the measured limiting voltage, the voltage protection level characterizes the performance of an SPD in limiting the voltage across its terminals.

Note: The voltage protection level is the measured limiting voltage recorded under a specified current magnitude and waveshape, and rounded up to the next highest voltage selected from a list of preferred values found in IEC 61643-1 Standard for surge protective devices connected to low-voltage power distribution systems. For SPDs tested to Test Class I, U_p is generally stated using a 10/350 I_{imp} and for SPDs tested to Test Class II, using an 8/20µs I_{max}.

VOLTAGE PROTECTION RATING (VPR)

A rating selected from a list of preferred values as given in Table 63.1 of ANSI®/UL 1449 and assigned to each mode of protection. The value of the VPR is determined as the nearest highest value taken from Table 63.1 to the measured limiting voltage determined during the transient-voltage surge suppression test using the combination wave generator at a setting of 6 kV, 3 kA.
